Dynamical Systems
and Environmental Models

Proceedings of an International Workshop cosponsored
by IIASA and the Academy of Sciences of the GDR
held on the Wartburg, Eisenach (GDR), March 17—21, 1986

Edited by
Hans Günter Bothe
Werner Ebeling
Alexander B. Kurzhanski
Manfred Peschel

Akademie-Verlag Berlin 1987
Contents

Part I: Mathematical Theory of Dynamical Systems

H.G. BOTHE
Hausdorff dimension of attractors: An example.................. 9

P. KINDLMANN
K-stability as an ecologically more relevant stability concept ... 14

A. LASOTA
Stability, periodicity and chaos from the statistical point of view 24

K.R. SCHNEIDER
Singularly perturbed autonomous differential systems ........... 32

A.N. SHARKOVSKY, YU.K. MAISTRENKO
Difference equations with continuous time as mathematical models of the structure emergencies .................. 40

E.E. SHNDL
Stability of equilibria in critical cases .................... 50

Part II: General Mathematical Models

E. AMANN
Permanence in population dynamics ............................ 58

W. EBELING, A. ENGEL, R. FEISTEL, V.G. MAZENKO
Models of evolution processes including age structure .......... 67

F. FELBER, A. HUNDING, H. MALCHOW
Pattern formation in an ionic reaction-diffusion system: A contribution to the morphogene prepattern theory of mitosis 76

H. HERZEL, TH. SCHULMEISTER
Chaotic dynamics and fluctuations in a biochemical system .......... 85

R.W. LEVEN, B.P. KOCH, G.S. MARKMAN
Periodic, quasiperiodic and chaotic motion in a forced predator-prey ecosystem .......................... 95

J.S. NICOLIS
Chaotic dynamics of logical paradoxes .................... 105

M. PESCHEL, M. VOIGT, W. MENDE
Control of growth processes ................................ 114

Part III: Mathematical Models for Concrete Processes

A. ARNEODO, F. ARGOUIL, P. RICHETTI, J.C. ROUX
The Belousov-Zhabotinskii reaction: A paradigm for theoretical studies of dynamical systems .................. 122

P. BRUNOVSKY, T. KMET
The nitrogen transformation cycle in water .................... 132

G. CZAJKOVSKI
Modelling of polymer growth ................................. 139

H.I. FREEDMAN, G.S.K. WOLKOWICZ
A mathematical model of group defence in predator-prey systems ... 149

K.P. HADELER
Vector-transmitted diseases in structured populations ........... 154
Z. KUBÍČKOVÁ, M. KUBÍČEK, M. MAREK
Nonlinear behaviour in mathematical models of anaerobic digesters ........................................ 162

E. LABOS, E. NOGRADI
Examples of computer-aided exploration and design of dynamical systems in neurosciences: Design of optimal nets .................. 172

S. MARKOV, T. KOSTOVA-VASILEVSKA
A dynamical model of synaptic transmission ................................. 182

K. SIGMUND
Gradients for replicator systems ........................................ 186

Part IV: Mathematical Description of Environmental Processes

T. ALDENBERG
The limiting factor concept in relation to stability, sensitivity and bifurcation in plankton models ......................... 196

G. BÁRNYA, P. ERDI
Effects of structured environment to dynamic behaviour: Some illustrations ........................................ 209

TH. BLEY, B. HEINRITZ
Modelling and control of yeast growth in biotechnical systems .... 213

H. BÖSSL
A dynamic simulation model of tree development under pollution stress ........................................................................ 220

H. BRÖHL-KERNER
A biota model to assess the influence of human impacts on the global carbon cycle ........................................... 230

L. KAIRIUKSTIS
An integrative approach to the solution of ecological problems with particular attention to the regional case ........................................ 240

W. MEHDE, K.-F. ALBRECHT
Application of the evolon model on evolution and energy growth processes .................................................. 253

L.F. OLSEN
Non-linear dynamics of the epidemics of some childhood deseases in Copenhagen, Denmark ........................................ 265

E.M. VAN DE VRIE
Modelling an estimating transport and fate of heavy metals in water column and sediment layer in some enclosed branches of the sea in the S.W. Netherlands ........................................ 273

POSTER SESSION

T. CZIERZYNSKI
Mathematical software developed by the Karl-Weierstraß-Institute of Mathematics ............................................... 282
