Mediterranean-Type Ecosystems

The Role of Nutrients

Edited by
F.J. Kruger  D.T. Mitchell  J.U.M. Jarvis

With 143 Figures

Springer-Verlag
Berlin Heidelberg New York Tokyo 1983
Contents

Section I. Evolution and Character of Mediterranean-Type Ecosystems

1. The Comparative Evolution of Mediterranean-Type Ecosystems: A Southern Perspective. H. J. Deacon ........................................ 3
3. Ecological Control of the Vegetation of Southwestern Australia: Moisture versus Nutrients. J. S. Beard .................................. 66
4. Influence of Nutrients on the Composition and Distribution of Plant Communities in Mediterranean-Type Ecosystems of Israel A. Rabinovitch Vin ......................................................... 74
5. Approaches to the Definition of Mediterranean Growth Forms G. Orshan ................................................................. 86

Section II. Plant Form and Function

6. Carbon-Gaining Capacity and Allocation Patterns of Mediterranean-Climate Plants. H. A. Mooney ........................................ 103
8. Canopy Structure of Mediterranean-Type Shrubs in Relation to Heat and Moisture. P. C. Miller ........................................ 133

Section III. Nutrient Cycling

10. Nutrient Cycling in Australian Heath and South African Fynbos R. H. Groves ................................................................. 179
11. Impact of Fire on Nutrient Cycles in Mediterranean-Type Ecosystems with Reference to Chaparral. P. W. Rundel ......................... 192
13. The Effects of Different Fire Regimes on Soil Nutrient Levels in Quercus coccifera Garrigue. L. Trabaud .................................... 233
Section IV. Plant Nutrition

15. The Effects of Fire on Photosynthesis in Chaparral Resprouts W. C. Oechel and S. J. Hastings 274

17. Comparative Phenology of Mediterranean-Type Plant Communities J. Kummerow 300

Section V. Community Patterns and Diversity

18. Some Thoughts on Resource Competition and Diversity in Plant Communities. D. Tilman 322

20. Continental Diversity Patterns and Convergent Evolution in Bird Communities. M. L. Cody 357

21. Distribution and Species Diversity of Birds and Plants in Fynbos Vegetation of Mediterranean-Climate Zone, South Africa W. R. Siegfried and T. M. Crowe 403

22. Plant Community Structure – Spatial Partitioning of Resources W. E. Westman 417

23. Plant Community Diversity and Dynamics in Relation to Fire F. J. Kruger 446

24. Mammal Species Diversity in Australian Heathlands: the Importance of Pyric Succession and Habitat Diversity. B. J. Fox 473

Section VI. Plant-Animal Interactions

26. The Role of Sclerophyllous Leaves in Determining Insect Grazing Damage. P. A. Morrow 509

27. Defoliation Patterns in Matorral Ecosystems. E. R. Fuentes and J. Etcheagaray 525

Subject Index 543
