Contents

1. Introduction
   Biopharmaceutics
   Drug Interactions

2. The Complex System

3. Biological Half-Life, Elimination Rate Constant, and Volume of Distribution
   Biological Half-Life
   Elimination Rate Constant
   Apparent Volume of Distribution

4. Bioavailability, Blood Levels, and Urinary Excretion Data
   Bioavailability
   Blood Levels and Urinary Excretion Data
   Interpretation of Drug Blood (Plasma) Level Curves

5. Anatomy and Physiology of the Gastrointestinal Tract

6. Mechanism of Drug Absorption
   The Cell Membrane: The Gastrointestinal Barrier
   Passive Diffusion
   Carrier Transport
   pH Partition Theory of Drug Absorption
   Other Factors Affecting Gastrointestinal Absorption
   Fick’s Law and Drug Absorption

7. Dissolution and Drug Absorption
   Dissolution Rate
   Factors That Affect Dissolution Rate
   Surface area
   Solubility in diffusion layer
   Crystalline form
   State of hydration
   Noyes-Whitney Equation and Drug Dissolution

8. Effect of Drug Product Design and Manufacture on Drug Availability
   The Dosage Form
   Compressed Tablets, Disintegration Time, and Dissolution Rate
   Formulation and Processing Factors

ix
   Methods for Determining Bioavailability
   Clinical trials
   Quantification of pharmacologic effect
   Measurement of drug and/or its metabolites in blood and urine
   Methods and Criteria for Bioavailability Testing
   Presentation of Bioequivalence Data
   Crossover Design
   Acceptability of Bioavailability Data
   Drug Product Selection

10. Terminology Associated with Drug Interactions

11. Drug Interactions in the Gastrointestinal Tract

12. Drug Interactions During Transport
   Transport of Drugs in the Bloodstream
   Drug–Drug Interactions During Transport

13. Drug Interactions Associated with Metabolism
   Drug Metabolism
   Drug Interactions by Accelerated Metabolism
   Drug Interactions by Inhibited Metabolism

14. Drug Interactions at the Receptor Site
   Interactions at the Adrenergic Nerve Ending (Adrenergic Neuron)

15. Drug Interactions Associated with Renal Excretion
   Renal Excretion
   Drug Interaction by Altered Urinary Excretion
   Interactions Associated with Sodium- and Potassium-Depleting Diuretics

Reading and Resource Material
   Biopharmaceutics
   Drug Interactions

Subject Index
