Vascular Plants as Epiphytes
Evolution and Ecophysiology

With 69 Figures

Springer-Verlag Berlin Heidelberg New York London Paris Tokyo Hong Kong
## Contents

1 Vascular Epiphytes: Setting the Scene  
U. LÜTTEGE (With 9 Figures)  

1.1 The Conquest of Space  
1.2 Life-Forms  
1.3 Importance: Biomass Production, Taxonomic Diversity, Economic Use  
1.4 Stress  
1.4.1 Environmental Gradients Along Stratum Heights in Rainforests  
1.4.2 Stress Driving Evolution  
1.4.3 Stress and Ecophysiology  
1.4.4 Stress Determining Floristic Diversity  
1.5 Interactions with Other Non-Host Organisms  
1.6 Curiosity

2 The Evolution of Epiphytism  
D.H. BENZING (With 10 Figures)  

2.1 Ancestral Habitats: Dark and Moist or Exposed and Dry?  
2.2 The Geologic Record of Epiphytism  
2.3 The Systematic Occurrence of Epiphytes  
2.4 Epiphytism as a Coherent Ecological Category  
2.5 Classification of Epiphytes  
2.6 Continuously-Supplied Versus Pulse-Supplied Epiphytes  
2.7 Patterns of Origin  
2.8 Predisposition and Phylogenetic Constraints  
2.9 Historical Basis for Canopy Dependence  
2.9.1 Ferns  
2.9.2 Liliopsida as a Whole  
2.9.3 Nonorchid Monocotyledons  
2.9.4 Orchids  
2.9.5 Dicotyledons  
2.9.6 Ancestral Habitats

3 Carbon Dioxide Concentrating Mechanisms and the Evolution of CAM in Vascular Epiphytes

H. GRIFFITHS (With 2 Figures) ........................................ 42

3.1 Introduction .......................................................... 42

3.2 Evolution and Characteristics of Biochemical and Biophysical CO$_2$ Concentrating Mechanisms .................................. 43

3.2.1 Carboxylase and Oxygenase Functions of RUBISCO .............................................. 44

3.2.2 $C_4$ Photosynthesis as a CO$_2$ Concentrating Mechanism .............................................. 47

3.2.3 CAM as a CO$_2$ Concentrating Mechanism .............................................................. 48

3.2.4 CO$_2$ Concentrating Mechanisms in Aquatic Plants .................................................. 50

3.3 Ecophysiological Interactions in the Development of CO$_2$ Concentrating Mechanisms .................................................. 52

3.3.1 Efficiency of Water Use ................................................. 53

3.3.2 Carbon Economy ....................................................... 54

3.3.3 Nitrogen Economy ....................................................... 55

3.3.4 Responses to Photosynthetically Active Radiation ...................................................... 56

3.4 Phylogenetic Distribution of CAM in Vascular Epiphytes .................................................. 58

3.4.1 Evolution of Epiphytism and CAM in the Polypodiaceae ............................................. 60

3.4.2 Evolution of Epiphytism and CAM in the Monocotyledons ........................................... 64

3.4.3 Evolution of Epiphytism and CAM in the Dicotyledons .............................................. 65

3.5 Regulation and Expression of CAM in Vascular Epiphytes .................................................. 68

3.5.1 Constitutive CAM ....................................................... 73

3.5.2 $C_3$-CAM Intermediates ................................................ 74

3.6 Cost–Benefit Relationships of CO$_2$ Concentrating Mechanisms ............................................. 76

3.6.1 Energetics of CO$_2$ Concentrating Mechanisms ......................................................... 76

3.6.2 $C_3$ and CAM Epiphyte Habitat Preference ............................................................... 78

3.7 Evolution of CAM and the Epiphytic Habit: Conclusions .................................................. 79

References ................................................................. 81

4 Gas Exchange and Water Relations in Epiphytic Tropical Ferns

M. KLUGE, P.N. AVADHANI and C.J. GOH (With 10 Figures) .................................................. 87

4.1 Introduction .......................................................... 87

4.2 The Ecophysiological Problem ........................................ 87

4.3 Nest Ferns ............................................................. 88

4.3.1 Morphology ............................................................ 88

4.3.2 Gas Exchange of Nest Ferns in Situ ......................................................... 90

4.4 Xeromorphic Ferns ..................................................... 93

4.4.1 Anatomical and Physiological Adaptations ......................................................... 93

4.4.2 Performance of CAM Ferns Under Laboratory Conditions ............................................. 95

4.4.2.1 Water Deficiency ....................................................... 96
