Contents

Preface v
Contributors xi

1. Designing Drugs that Interact with Nucleic Acids 1
   Thomas J. Perun and C. L. Propst
   I. Introduction 1
   II. The Drug Design Process 2
   III. Computer-Aided Drug Design 4
   IV. The Nucleic Acids as Targets 7
   V. Drugs that Interact with Nucleic Acids 10
   VI. Future Considerations 12
      References 12

METHODS

2. Structural Studies of Drug-DNA Interactions by X-ray 17
   Crystallography and NMR Spectroscopy
   Andrew H.-J. Wang and Howard Robinson
   I. Introduction 17
   II. X-ray Crystallography 19
   III. NMR Spectroscopy 36
   IV. Discussion 54
   V. Future Challenges 57
      References 57

3. Modeling Drug–Nucleic Acid Interactions: An Exercise in 65
   Computer Graphics and Computational Chemistry
   Shashidhar N. Rao
   I. Introduction 66
   II. Model Building 70
   III. Results and Discussion 80
   IV. General Remarks 87
   V. Conclusions 88
      References 89

vii
4. Sequence Specificity of Drug-DNA Interactions
   James C. Dabrowiak, Allison A. Stankus, and Jerry Goodisman
   I. Introduction 93
   II. Methods for Studying Sequence Specificity 94
   III. Quantitative Footprinting Analysis 127
   IV. Kinetic Data for Drug-DNA Interactions Using a Sequencing Gel 138
   V. Conclusions 139
   References 140

5. Construction of Quantitative Structure-Activity Relationships (QSARs) from Ligand-DNA Molecular Modeling Studies
   A. J. Hopfinger, Mario Gustavo Cardozo, and Yoshiyuki Kawakami
   I. Introduction 152
   II. Observed Structure-Activity Relationships 153
   III. Modes of Action 154
   IV. Current Status of Molecular Modeling of Ligand-DNA Interactions 155
   V. DNA-Ligand Intercalation Modeling Problems 155
   VI. QSAR Intercalation Studies 160
   VII. Summary 190
   References 190

6. The Molecular Basis of Sequence-Specific DNA-Protein Interactions
   Thomas Kodadek
   I. Introduction 196
   II. DNA Metabolism: A Brief Overview 197
   III. Sequence-Specific Protein-DNA Interactions: Theoretical Considerations 217
   IV. Major Structural Motifs for Sequence-Specific DNA Binding: The Helix-Turn-Helix 222
   V. The Homeodomain: A Eukaryotic Version of the Helix-Turn-Helix Motif 249
   VI. Zinc Finger Proteins 257
   VII. The Leucine Zipper 275
   VIII. The EcoRI Endonuclease-DNA Complex 283
   IX. The Arc/Mnt/Met Repressor Family 285
   X. Summary and Conclusions 289
   References 292
Applications

7. Netropsin and the Lexitropsins: The Search for Sequence-Specific Minor-Groove-Binding Ligands
   Mary L. Kopka and Teresa A. Larsen
   
   I. Introduction 304
   II. How Drugs Bind to DNA 304
   III. Minor Groove Binders 307
   IV. Drug Recognition Patterns 337
   V. GC Recognition: The Lexitropsin Rationale 339
   VI. Alternate Strategies in Drug Design 351
   VII. Conclusion 360
   References 360

8. Pyrrolo(1,4)benzodiazepines: Unraveling the Complexity of the Structures of the Tomaymycin-DNA Adducts in Various Sequences Using Fluorescence, 'H-NMR, and Molecular Modeling
   William A. Remers, Mary D. Barkley, and Laurence H. Hurley
   
   I. Introduction 376
   II. Techniques 379
   III. Oligomers 381
   IV. Determination of the Structural Aspects of the Tomaymycin-DNA Adducts 382
   V. Effect of Tomaymycin Bonding on Backbone and Sugar Geometry on d(CICGAATTCICG)2 405
   VI. Intermolecular Interactions Determining the Orientation and Stereochemistry of Tomaymycin on d(ATGCAT)2 and d(CICGAATTCICG)2 413
   VII. Biochemical and Biological Implications 417
   VIII. Conclusions 419
   References 419

   Lester A. Mitscher and Linus L. Shen
   
   I. Introduction 424
   II. Structure-Activity Relationships of Quinolones 438
   III. Methods Used for Studying the Mode of Action of Topoisomerase Inhibitors 446
   IV. Model of Quinolone Inhibition of DNA Gyrase 457
   V. Implications of the Model in Drug Design 461
   VI. Conclusions 465
   References 467
