Contents

Preface xi

1 Introduction 1
1.1 Ecology and trees 1
1.2 The spatial framework and the changing seasons 5
1.3 Woodland ecosystems 12
1.4 Tropical forests: the primary complexity 17
1.5 Forest biome-types 20
1.6 Threats to the forest 25
1.7 Silviculture and the replacement of trees 27

2 Primary production: the autotrophs 33
2.1 Plant life forms 33
2.2 Biological spectra 37
2.3 Processes of primary production and the light climate 40
2.4 Sun and shade plants 49
2.5 Woodland hydrology and the water relations of forest plants 58
2.6 Evergreen and deciduous strategies 65

3 Reproductive strategies of woodland plants 69
3.1 Plant strategies 69
3.2 Reproduction and fruiting 75
3.3 Masting 81
3.4 Influence of animals 87
3.5 Seasonal changes and aspect societies 91

4 Soils, climate and zonation 97
4.1 Soils and trees 97
4.2 Roots, foraging and competition 107
4.3 Zonation: distribution in space 115
4.4 Altitudinal zonation and alpine timberlines 124
4.5 Diversity in communities of woodland plants 129
5 Forest change
5.1 Succession, cyclic change and gap regeneration 141
5.2 The changing mosaic: a comprehensive theory of forest maintenance 153
5.3 Patch dynamics and regeneration waves 159
5.4 Forest change and seral woodlands 164
5.5 Succession on Krakatau: the natural experiments 175
5.6 Origins of British woodlands and their floras 179
5.7 The ecology of coppicing 186

6 The herbivore subsystem and the exploitation of living autotrophs 195
6.1 The role of heterotrophs in woodland ecosystems 195
6.2 Epiphytic microorganisms 195
6.3 Forest pathogens 196
6.4 Dutch elm disease 202
6.5 Exotic forest pests 205
6.6 Woodland herbivores 207
6.7 Influence of defoliation on trees 214
6.8 The importance of woodland carnivores 216

7 Community change and stability 219
7.1 Population stability: selection and strategy 219
7.2 Population fluctuation: key-factor analysis 224
7.3 Regulation 228
7.4 Dynamics of specific woodland animals 228
7.5 Changes in community structure 241
7.6 Diversity and stability 242

8 Decomposition and renewal 245
8.1 The vital key 245
8.2 Decomposition: resources and processes 245
8.3 Degradative successions 248
8.4 Divers detritivores 258
8.5 Relative roles of agents of decay 264

9 Energy and nutrients 269
9.1 Taking stock of woodlands 269
9.2 Biomass and productivity of autotrophs 269
9.3 Secondary producers: the herbivore subsystem 274
9.4 The decomposition subsystem 281
9.5 Energy flow through woodland ecosystems 288
9.6 Nutrient cycling in temperate, boreal and tropical woodlands 290
9.7 The influence of man 306
## 10 Working forests

<table>
