COMPREHENSIVE BIOCHEMISTRY

Series Editors:
ALBERT NEUBERGER
Chairman of Governing Body, The Lister Institute of Preventive Medicine, University of London, London (U.K.)

LAURENS L.M. VAN DEENEN
Professor of Biochemistry, Biochemical Laboratory, Utrecht (The Netherlands)

VOLUME 38

SELECTED TOPICS IN THE HISTORY OF BIOCHEMISTRY
PERSONAL RECOLLECTIONS. IV.

Volume Editors:
E.C. SLATER
Department of Biochemistry, University of Southampton, Southampton (United Kingdom)

RAINER JAENICKE
Institut für Biophysik und Physikalische Biochemie, Universität Regensburg, D-93040 Regensburg (Germany)

GIORGIO SEMENZA
Laboratorium für Biochemie, ETH-Zentrum, CH-8092 Zürich (Switzerland)

CONTENTS

VOLUME 38

A HISTORY OF BIOCHEMISTRY

Selected Topics in the History of Biochemistry
Personal Recollections. IV.

Preface to Volume 38 ........................................ v
Contributors to this Volume .............................. vii
In Memoriam ................................................. ix
Contents ....................................................... xi

Chapter 1. Life, Luck and Logic in Biochemical Research
by F. LyneN (Ed.: G.S.) .................................... 1

Chapter 2. Memories of Heidelberg – and of Other Places
by T. Wieland (Ed.: R.J.) ................................. 21

Early life in Munich ........................................ 21
Years of studies ........................................ 24
The first years in Heidelberg ........................... 31
Kogl’s tumor theory ..................................... 37
Research and teaching .................................. 40
  Analytical studies ................................... 41
Lactic acid dehydrogenases ............................ 44
  Multiple forms ..................................... 45
The time in Mainz ........................................... 47
Biochemical research after the war .................. 48
  Peptides ............................................. 50
  Glutathione ........................................ 53
First journey to the USA .................................. 54
Johann Wolfgang Goethe University in Frankfurt a. M. 56
Half a century of mushroom research ............... 59
Chapter 3. Stepping Stones – Building Bridges
by B. WITKOP (Ed.: R.J.) .................................................. 109

Between two wars ....................................................... 109
Professors who did and did not profess ......................... 115
Coping with a vanishing past .................................... 116
The painful transition from the fragile Weimar Republic to the tyranny of the Third Reich .................. 118
Chemistry in Munich: Richard Willstatter and Heinrich Wieland ................................................. 120
‘Kristallnacht’ or the ‘Night of Broken Glass’ ...................... 122
Dissertation on the toxin of the deathcap ...................... 124
The end of the war .................................................... 126
Harvard University, 1947–1950 .................................. 130
Colleagues and friends .............................................. 133
Amino acids – then and now .................................... 137
Much ‘trypto-fun’ and the International Study Group for Tryptophan Research (ISTRY) .................. 142
Albert Hofmann’s ‘Problem Child’ .............................. 143
Probing sequences of the gramicidins, serum albumins and TMV virus ........................................... 146
Chapter 6. Chorismic Acid and Beyond
by F. Gibson (Ed.: E.C.S.)

Scientific beginnings .................................................. 261
First steps in research .................................................. 265
Aromatic biosynthesis .................................................. 270
A change of direction ................................................... 277
Menaquinone and ubiquinone: biosynthesis and function 279
Phenolic compounds and iron transport ......................... 282
ATPase and oxidative phosphorylation ............................ 285
A trail of research ....................................................... 293
Miscellanea ............................................................... 294
Acknowledgements ...................................................... 298

References .................................................................. 298

Chapter 7. Charge Separation: A Personal Involvement in a Fundamental Biological Process
by R.N. Robertson (Ed.: E.C.S.)

The original charges – H⁺ and HCO⁻³ ............................... 305
Charge separation – respiration and H⁺ and e⁻ ................... 307
Energy-rich phosphate and mitochondria .......................... 313
Respiration and fruit ripening ......................................... 318
Charge separation and oxidative phosphorylation ............ 320
Mitchell's chemiosmotic hypothesis ............................... 323
Protons, electrons, phosphorylation and active transport .... 327
Speculation on the energy-transducing bilayer .................. 331
Different interpretation of Mitchell's work ..................... 334
Charge separation and ion transport .............................. 339
After retirement, continuing interest in membranes ........... 340
Molecular movements within the lipid bilayer .................. 342
A life influenced by charge separation ............................ 345

References .................................................................. 345
Chapter 8. A Biochemical Autobiography
by C. Rimington (Ed.: E.C.S.) ........................................... 349
