TABLE OF CONTENTS

Preface	xi
Contributors	xiii
PART I	
CASE STUDIES ON SPECIES SURVIVAL IN FRAGMENTED LANDSCAPES	
The case for a science-based strategy of conserving threatened butterfly populations in the UK and north Europe <i>J.A. Thomas</i>	1
Decline and rehabilitation of the Apollo butterfly <i>Parnassius apollo</i> (LINNAEUS, 1758) in the Pieniny National Park (Polish Carpathians) <i>Z. Witkowski and P. Adamski</i>	7
Effects of habitat fragmentation on the butterfly <i>Maculinea alcon</i> in the Netherlands <i>I. Wynhoff, J.G.B. Oostermeijer, M. Scheper, and J.G. van der Made</i>	15
Forest resource management and the conservation of arboreal marsupials in Central Victoria, South-Eastern Australia <i>D.B. Lindenmayer</i>	24
The conservation biology of a specialist and generalist gecko in the fragmented landscape of the Western Australian wheatbelt <i>S. Sarre, K. Wiegand, and K. Henle</i>	39
Bird population dynamics in relation to habitat quality <i>O. Bourski</i>	52
Population size, genetic variation, and related parameters in small, isolated plant populations: a case study <i>J.G.B. Oostermeijer</i>	61
Habitat networks in the fragmented landscape of the Western Australian wheatbelt: Preliminary results, involvement with landcare groups, and experience in implementation <i>D. A. Saunders</i>	69

PART II
A REVIEW OF SPECIES SURVIVAL IN FRAGMENTED
HABITATS: THEORY AND APPROACHES

Species survival and metapopulations: Conservation implications from ecological theory	81
<i>H.J. Poethke, A. Seitz, and C. Wissel</i>	
Genetical aspects of fragmented plant populations	93
<i>J.G.B. Oostermeijer, A. Berholz, and P. Poschlod</i>	
Applications of population viability analysis in conservation biology in Australia	102
<i>D.B. Lindenmayer and H.P. Possingham</i>	
Area requirements and isolation: Conservation concepts and application in Central Europe	111
<i>K. Henle and M. Mühlenberg</i>	
Dispersal of plants in fragmented landscapes - Changes of dispersal processes in the actual and historical man-made landscape	123
<i>P. Poschlod, J. Bakker, S. Bonn, and S. Fischer</i>	
Experimental fragmentation	128
<i>C.R. Margules</i>	
Landscape fragmentation and landscape planning, with a focus on Germany	138
<i>M. Kleyer, G. Kaule, and J. Settele</i>	

PART III
THE FIFB PROJECT

FIFB: Conceptual frame

Studying species survival in fragmented landscapes: the approach of the FIFB	152
<i>M. Mühlenberg, K. Henle, J. Settele, P. Poschlod, A. Seitz, and G. Kaule</i>	

FIFB: the hilly landscape of Halle - main study area

The Hilly landscape of Halle - main study area of the FIFB: Natural history and the selection of target species for conservation biological research	161
<i>P. Bliss, W. Kuhn, H. Schöpke, J. Settele, and M. Wallaschek</i>	
Vegetation Cover of porphyry Outcrops	169
<i>E.-G. Mahn and M. Partzsch</i>	

Vegetation structure of the porphyry Landscape of Halle <i>A. Sundermeier</i>	173
Relations of invertebrate species to habitat Quality in the fragmented Porphyry Landscape near Halle (Sachsen-Anhalt, Germany) <i>T. Baumann and E. Hoffmann</i>	176
Invertebrates and area size in the porphyry Landscape of Halle <i>R. Biedermann and M. Appelt</i>	183
Invertebrates and Isolation in the porphyry Landscape of Halle <i>W. Seufert and H. Bamberger</i>	187
 <i>FIFB: Survival of plants in fragmented landscapes</i>	
Why are some plant species of fragmented continental dry grasslands frequent and some rare? - The role of germination and establishment <i>A.K. Jackel and P. Poschlod</i>	194
Survival of small isolated populations of <i>Muscari tenuifolium</i> TAUSCH in dry continental Grasslands - The role of reproduction <i>G. Weiß and E.G. Mahn</i>	204
Restoration of fallow or afforested calcareous grasslands by clear-cutting <i>S. Kiefer and P. Poschlod</i>	209
A coenotical approach of plant population viability analysis on successional and afforested calcareous grassland sites - Towards an ecological flora data base <i>P. Poschlod, S. Fischer, and S. Kiefer</i>	219
 <i>FIFB: Survival of vertebrates in fragmented landscapes</i>	
Survival of birds in fragmented landscapes <i>G. Rothhaupt and B. Vogel</i>	230
Survival of lizards in habitat islands in Central Europe - Introduction and summary conclusions <i>K. Henle</i>	237
Survival of the sand lizard <i>Lacerta agilis</i> LINNAEUS, 1758 (Sauria, Lacertidae) in relation to habitat quality and heterogeneity <i>B. Märtens, K. Henle, W. Kuhn, R. Krug, K. Jost, W.-R. Große, and C. Wissel</i>	241
Consolidation of vineyards, mitigations, and survival of the common wall lizard (<i>Podarcis muralis</i>) in isolated habitat fragments <i>C. Bender, H. Hildenbrandt, K. Schmidt-Loske, V. Grimm, C. Wissel, and K. Henle</i>	248

FIFB: Survival of butterflies in fragmented landscapes

- Research on population viability of *Melitaea didyma* (Lepidoptera, Nymphalidae) 262
K. Vogel and J. Johannesen
- A population ecological study of *Chazara briseis* (Lepidoptera, Satyrinae) 268
W. Seufert and N. Grosser
- Aspects of the population vulnerability of the large blue butterfly, *Glaucopsyche (Maculinea) arion*, in South-West Germany 275
R. Pauler-Fürste, G. Kaule, and J. Settele
- Towards demographic population vulnerability categories of butterflies: Requirements of and species selection for future population ecological research 282
J. Settele and H.J. Poethke

FIFB: Survival of grasshoppers and bush crickets in fragmented landscapes

- The ecological background of population vulnerability in central European grasshoppers and bush crickets: A brief review 290
G. Köhler
- A population vulnerability analysis of the stripe-winged grasshopper, *Stenobothrus lineatus* (Caelifera: Acrididae) 299
J. Samietz, U. Berger, and G. Köhler
- A population vulnerability analysis of the red-winged grasshopper, *Oedipoda germanica* (Caelifera: Acrididae) 312
G. Wagner and U. Berger
- Elements of population vulnerability of the blue-winged grasshopper, *Oedipoda caerulescens* (Caelifera: Acrididae) 320
M. Appelt
- Population vulnerability of the grey bush cricket *Platycleis albopunctata* (GOEZE, 1778) (Ensifera: Tettigoniidae) 324
E. Gottschalk

FIFB: Survival of snails in fragmented landscapes

- Survival of snails in fragmented landscapes 329
A. Bahl, M. Pfenninger, H. Bamberger, M. Frye, and B. Streit

FIFB: Genetics, habitat models, and implementation

Genetics of insect populations in fragmented landscapes - A comparison of species and habitats	344
<i>M. Veith, J. Johannesen, B. Nicklas-Görge, D. Schmeller, U. Schwing, and A. Seitz</i>	
Mapping and assessing habitat models on the landscape level	356
<i>W. Kuhn and M. Kleyer</i>	
Implementation of FIFB results in environmental planning	363
<i>K. Amler, F. Lohrberg, and G. Kaule</i>	

PART IV**SUMMARY CONCLUSIONS**

Species survival in relation to habitat quality, size, and isolation: Summary conclusions and future directions	373
<i>K. Henle, P. Poschlod, C.R. Margules, and J. Settele</i>
