Québec, Canada
CONTENTS

Foreword vii

Prologue by a Mathematician: xiii
The Role of Mathematics in Phyllotaxis
I. Adler

Prologue by a Botanist: xvii
Phyllotactic Symmetry in Plant Growth
R. O. Erickson

Prologue by a Molecular Geneticist: xxvii
The Role of Homoetic Genes and of Molecular
Mimicry in the Determination of Plant and Animal Symmetries
A. Lima-de-Faria

Prologue by a Crystallographer: xxxv
Phyllotaxis
A. L. Mackay

List of Contributors xlv

Part I. Basic Information Gathering and Pattern Recognition
in Phyllotaxis
Data–Experimentation–Description

1. Investigation of Phyllotaxis of Rhododendron
L. A. Bursill and J. L. Rouse 3

2. Systems of Phyllotaxis in the Genus Eucalyptus
in Relation to Shoot Architecture
D. J. Carr 33

3. Pendulum Symmetry
W. A. Charlton 61
4. Phyllotaxis in the Vitaceae
   J. M. Gerrath, C. R. Lacroix and U. Poslusny
   89

5. Phyllotaxis in Flowers and in Flower Reversion
   R. F. Lyndon
   109

6. Decussate to Spiral Transitions in Phyllotaxis
   R. D. Meicenheimer
   125

7. The Physiological Basis of Pattern Generation in the Sunflower
   J. H. Palmer
   145

8. Plastochorone Ratio and Leaf Arc as Parameters of a
   Quantitative Phyllotaxis Analysis in Vascular Plants
   R. Rutishauser
   171

9. Changes in Phyllotactic Pattern Structure in Pinus L. due to
   Changes in Altitude
   I. I. Vakarelov
   213

10. Biastrepsis and Allomery of Stems of Dipsacus Sylvesteris Mill
    J. Vieth
    231

Part II. Pattern Generation in Phyllotaxis

   Modelling

11. Generating Phyllotaxis Patterns on a Cylindrical Point Lattice
    I. Adler
    249

12. Modelling Meristic Characters of Asteracean Flowerheads
    J. Battjes and P. Prusinkiewicz
    281

13. The Shape of Dirichlet Regions in a Coxeter Lattice as
    a Function of Divergence and Rise
    R. Dixon
    313

14. The Selection of Phyllotactic Patterns
    S. Douady
    335

15. How Plants Produce Pattern. A Review and a Proposal
    that Undulating Field is the Mechanism
    P. B. Green, C. R. Steele and S. C. Rennich
    359
16. The Crocograph and its Practical Utility in Phyllotaxis
   N. Hallé 393

17. Phyllotaxis as a Dynamical System: A Study in Number
   J. Kappraff, D. Blackmore and G. Adamson 409

18. Phyllotaxis as a Geometrical and Dynamical System
   A.-J. Koch, G. Bernasconi and F. Rothen 459

19. Creating Phyllotaxis from Seed to Flower
   F. M. J. van der Linden 487

20. The Role and Importance of Vertical Spacing at the Plant
    Apex in Determining Phyllotactic Pattern
    W. W. Schwabe 523

Part III. Origins of Phyllotaxis 537
  Homology–Comparative Morphology–Exotic Phyllotaxis

21. The Phyllotactic Patterns as Resulting from Self-Organization
    in an Iterative Process
    S. Douady and Y. Couder 539

22. Universal Results from a Simple Model of Phyllotaxis
    J. Guerreiro and F. Rothen 571

23. Elementary Rules of Growth in Phyllotaxis
    R. V. Jean 601

24. Universality in Phyllotaxis: A Mechanical Theory
    H. W. Lee and L. S. Levitov 619

25. The Atomic Origin of Structural Periodicity
    A. Lima-de-Faria 655

26. Uniform Spacing Models for the Morphogenesis of High
    Symmetry Biological Structures:
    Icosahedral Capsids, Coaxial Helices, and Helical Phyllotaxis
    C. J. Marzec 681

27. Models of Pattern Formation Applied to Plant Development
    H. Meinhardt, A.-J. Koch and G. Bernasconi 723
28. Light Harvesting "Fitness Landscapes" for Vertical Shoots with Different Phyllotactic Patterns 759
   K. J. Niklas

29. On the Origin of Symmetry, Branching and Phyllotaxis in Land Plants 775
   R. Sattler

30. Quasicrystalline Pattern Formation in Fluid Substrates and Phyllotaxis 795
   A. M. Selvam
