Mind Modelling:
A Cognitive Science Approach to Reasoning, Learning and Discovery
Contents

List of Contributors ........................................................................................................... 7
Mind Modelling: A brief introduction
Josef F. Krems, Ute Schmid & Fritz Wysotzki ................................................................... 9

Section I: Architectures, Modelling Environments and their Applications ................. 15

1.1 A comparison of ACT-R and Soar
    Todd R. Johnson ........................................................................................................ 17

1.2 Evaluating the Design Based Approach
    Tim Read ..................................................................................................................... 39

1.3 COGENT: An Environment for the Development of Cognitive Models
    Richard Cooper, Peter Yule, John Fox & David Sutton ............................................. 55

1.4 Reusable models and graphical user interfaces:
    Realising the potential of a unified theory of cognition
    Frank E. Ritter, Randolph M. Jones & Gordon D. Baxter ......................................... 83

1.5 Modelling Motivation and Action Control in Cognitive Systems
    Gerhard Strube ........................................................................................................... 111

Section II: Reasoning and Discovery ............................................................................. 131

2.1 Mental model construction in spatial reasoning:
    A comparison of two computational theories
    Christoph Schlieder & Bettina Berndt ......................................................................... 133

2.2 Three empirically-based experiences in modelling diagnostic reasoning processes:
    Features and Issues
    Laurence Alpay, Eileen Scanlon, Rose Dieng & Alain Giboin .................................. 163
2.3 A Computational Model for Creative Planning
   Luis Macedo, Francisco C. Pereira, Carlos Grilo & Amilcar Cardoso
   193

2.4 Analogy Detection - Analogy Construction
   (An Approach to Similarity in Higher Order Reasoning)
   Friedhart Klix & Thomas Bachmann
   209

Section III: Learning
   231

3.1 Explicit Learning in ACT-R
   Niels A. Taatgen
   233

3.2 Skill Acquisition Can Be Regarded as Program Synthesis:
   An Integrative Approach to Learning by Doing and Learning by Analogy
   Ute Schmid & Fritz Wysotzki
   253

3.3 EPAM-like simulations of the recall of random chess positions
   Fernand Gobet
   285

3.4 The effect of previous problems in the Tower of London:
   Reminding or general learning imitating reminding?
   Gareth E. Miles & Stephen J. Payne
   303
