CONTENTS

Preface xvii

1 The Carbon Cycle 1

Global Aspects, 2
Organic Constituents of Soil, 5
  Nonhumic Substances, 5
  Lipids, 6
  Carbohydrates, 6
  Proteinaceous Constituents, 7
Humic Substances, 7
  Extraction and Fractionation, 7
  Humic Substances as a System of Polymers, 8
Biochemistry of Humus Formation, 10
Chemical Properties and Structures of Humic and Fulvic Acids, 15
Use of $^{14}$C in Soil Organic Matter Studies and Biodegradation Research, 16
Techniques and Approaches in $^{14}$C Studies, 17
  Preparation of $^{14}$C-Labeled Plant Material, 18
  Laboratory Incubations, 18
  Field Experiments, 18
  Degradation of Simple Substrates and Synthesis of Labeled Microbial Components, 19
Decay of $^{14}$C-Labeled Plant Residues, 22
Field Trials with $^{14}$C-Labeled Plant Residues, 23
Incorporation of $^{14}$C into Soil Organic Matter Components, 25
The Priming Action, 25
$^{14}$C Dating of Soils, 27
Principles of $^{14}$C Dating, 27
Mean Residence Time (MRT) of Soil Organic Matter, 28
Absolute Ages of Buried Soils, 30
In Situ Labeling of Soil Organic C from Bomb-Derived $^{14}$C–CO$_2$, 31
Use of $^{13}$C and the $^{13}$C/$^{12}$C Ratio, 33
Transformations in Waterlogged Soils and Sediments, 34
Protein Degradation, 36
Cellulose Degradation, 37
Lignin Modification, 37
Preservation of Other Plant Components, 37
Oxidation–Reduction Reactions, 38
Changes in Soils and Sediments During Submergence, 38
Nitrogen Transformations, 39
Summary, 40
References, 41

2 Soil Carbon Budgets and Role of Organic Matter in Soil Fertility

Factors Affecting Levels of Organic C in Soils, 47
The Time Factor of Soil Formation, 47
Effect of Climate, 50
Vegetation, 53
Parent Material, 55
Topography, 55
Effect of Cropping on Soil Organic Matter Levels, 56
Historical Aspects, 56
Maintenance of Soil Organic Matter (C), 62
Paleohumus, 64
Role and Function of Soil Humus, 65
Nutrient Availability, 66
The C/N/P/S Ratio, 67
Indirect Nutrient Effects, 68
Source of Energy for Soil Organisms, 68
Growth of Higher Plants, 69
Soil Physical Condition, 69
Soil Erosion, 70
Buffering and Exchange Capacity, 70
CONTENTS

Health Effects, 70
Miscellaneous Effects, 70
Organic Matter and Sustainable Agriculture, 71
Commercial Humates as Soil Amendments, 71
Origin and Nature of Commercial Humates, 71
Chemical Properties and Agricultural Value of Lignite
Humic Acids, 72
Summary, 74
References, 74

3 Soil Organic Matter Quality and Characterization 78

Pools of Organic Matter, 78
Litter, 79
Light Fraction, 80
Microbial Biomass, 81
Estimates from Microbial Counts, 81
Chemical Methods, 82
Fumigation Method, 83
Extraction Method, 84
Faunal Biomass, 85
Belowground Plant Constituents, 85
Water-Soluble Organics, 86
Stable Humus, 87
Soil Enzymes, 87
Simulation Models, 89
Physical Fractionation of Organic Matter, 92
Instrumental Methods for Determining Organic Matter
Quality, 93
Nuclear Magnetic Resonance Spectroscopy (NMR), 93
Brief Theory of NMR Spectroscopy, 94
Assignment of Chemical Shift Zones, 95
Limitations for Direct Analysis of Soils, 96
Analytical Pyrolysis, 99
Summary, 100
References, 100

4 Environmental Aspects of the Soil Carbon Cycle 107

Disposal of Organic Waste Products in Soil, 108
Specific Problems, 109
Contamination of Lakes and Streams with Organics, 111
Buildup of Toxic Metals, 112
Biological Pollutants, 114
Enrichment of Surface and Ground Water with
Nutrients, 115
Soluble Salts, 117
5 The Nitrogen Cycle in Soil: Global and Ecological Aspects 139

Geochemical Distribution of N, 141
    Origin of Soil N, 141
    Nitrogen in the Hydrosphere, 142
    Nitrogen in the Biosphere, 142
Reservoirs of N for the Plant–Soil System, 143
Nitrogen as a Nutrient, 145
    Assimilative Nitrate Reduction, 146
    Nitrogen Requirements of Plants, 147
Gains in Soil N Through Biological N₂ Fixation, 148
    Cyanobacteria, 152
    Free-Living Bacteria, 153
    Symbiotic N₂ Fixation by Leguminous Plants, 156
    Microorganisms Living in Symbiosis with Nonleguminous Plants, 160
    Future Trends in Biological N₂ Fixation, 162
Atmospheric Deposition of Combined N, 163
Nitrogen Losses from Soil, 164
    Bacterial Denitrification, 166
    Chemodenitrification, 172
        Reactions of Nitrite with Humic Substances, 173
        Classical Nitrite Reactions, 173
    Ammonia Volatilization, 175
    Leaching, 178
    Erosion and Runoff, 179
    Loss of N from Plants, 179
Flux of Soil N with Other Ecosystems, 180
Summary, 181
References, 183
6 The Internal Cycle of Nitrogen in Soil

Biochemistry of Ammonification and Nitrification, 192
Ammonification, 193
   Breakdown of Proteins and Peptides, 193
   Degradation of Nucleic Acids, 194
   Decay of Amino Sugars, 194
Urease in Soil, 194
Nitrification, 195
   Pathway of Nitrification, 195
   Isolation of Nitrifying Microorganisms, 197
   Factors Affecting Nitrification, 197
   Heterotrophic Nitrification, 198
Net Mineralization vs. Net Immobilization, 198
   The C/N Ratio, 199
   Mineralization and Immobilization Rates, 201
   Transformations in Sediments, 201
   Wetting and Drying, 202
Mineral N Accumulations, 202
Nitrogen Availability Indexes, 204
   Residual NO\texttextsuperscript{-3} in the Soil Profile, 205
   Incubation Methods, 205
   Chemical Methods, 206
Stabilization and Composition of Soil Organic N, 207
   The Humification Process, 207
   Chemical Distribution of the Forms of Organic N in Soils, 208
   Application of \textsuperscript{15}N-NMR Spectroscopy, 212
Nonbiological Reactions Affecting the Internal N Cycle, 214
   Ammonium Fixation by Clay Minerals, 214
   Biological Availability of Fixed NH\textsuperscript{+4}, 215
Ammonium-Fixing Capacity, 215
   Type of Clay Mineral, 215
   Potassium Status of the Soil, 215
   Concentration of NH\textsuperscript{+4}, 216
   Moisture Conditions, 216
   Soil pH, 216
Naturally Occurring Fixed NH\textsuperscript{+4}, 217
Fixation of NH\textsubscript{3} by Organic Matter, 218
Mechanisms of NH\textsubscript{3} Fixation, 220
Availability of Chemically Fixed NH\textsubscript{3} to Plants, 222
Nitrite–Organic Matter Interactions, 222
Modeling of the Soil N Cycle, 222
Summary, 225
References, 226
7 Dynamics of Soil N Transformations as Revealed by 15N Tracer Studies

Nitrogen Isotope Techniques, 230
Assumptions, 231
Steps in the Determination of Isotopic 15N, 231
Isotope-Ratio Analysis by Mass Spectrometry, 232
Nitrogen Balance Sheets, 236
Efficiency of Fertilizer N Use by Plants, 238
Influence of Fertilizer N on Uptake of Native Soil N, 239
Losses of Fertilizer N through Leaching and Denitrification, 240
Composition and Availability of Immobilized N, 242
Microbial Biomass N, 242
Nature of Newly Immobilized N, 244
Availability of Residual Fertilizer N, 246
Chemical Characteristics of Residual Fertilizer N, 246
Long-Time Effects, 247
Labeled Biologically Fixed (Legume) N, 248
Humus as a Source of N, 249
Natural Variations in 15N Abundance, 251
Summary, 253
References, 254

8 Impact of Nitrogen on Health and the Environment

Health Aspects, 257
Methemoglobinemia, 259
Stomach Cancer, 260
Other Effects, 260
Nitrate in Water Supplies, 260
Factors Affecting NO3− Levels in Natural Waters, 261
Management of Fertilizer N for Minimal Pollution and Maximum Efficiency, 263
Nitrate in Wells, 268
Nitrate in Animal Feed, 269
Nitrate in Food Crops, 270
Possible Connection Between Fertilizer N and Ozone Depletion, 270
Eutrophication, 274
Ecosystem Damage Due to Acid Rain, 275
Formation of Nitrosamines, 275
Summary, 277
References, 277
9 The Phosphorus Cycle

Global Aspects of the P cycle, 280
   Chemical Properties of Soil P, 281
   Origin of P in Soils, 282
   Reserves of Mineable Phosphate Rock, 283
   Phosphorus Content of Soils, 284
   Effect of Cropping and Fertilization on Soil P, 285
Phosphorus as a Plant Nutrient, 288
Environmental Impact of Soil P, 290
Chemistry of Soil P, 292
   Chemical Fractionation Schemes, 293
   Fractionations Based on Biological Availability, 294
   Phosphate Fixation, 295
   Water-Soluble P, 298
Organic Forms of Soil P, 300
   Determination of Organic P, 300
   Organic P Content of Soils, 301
   The C/N/P/S Ratio, 303
   Specific Organic P Compounds, 304
      Inositol Phosphates, 305
      Nucleic Acids, 307
      Phospholipids, 307
Application of $^{31}$P–NMR Spectroscopy, 308
Phosphorus in the Soil Microbial Biomass, 309
   Calculations Based on Cell Mass, 310
   The Fumigation Method, 310
   Adenosine Triphosphate (ATP), 311
   Phospholipid Analysis, 312
Soil Tests for Available P, 313
   Phosphorus Soluble in Water, 313
   Phosphorus Extractable with Dilute Acid-Fluoride
      (HCl·NH$_4$F), 313
   Phosphorus Soluble in NaHCO$_3$, 314
   Phosphorus Soluble in NH$_4$HCO$_3$-DTPA, 314
   Phosphorus Soluble in Dilute HCl:H$_2$SO$_4$, 314
   Isotopic Dilution of $^{32}$P, 314
   Other Approaches, 315
General Observations Regarding Soil P Tests, 315
Microbial Transformations in the P Cycle, 315
   Mineralization and Immobilization, 316
   Phosphatase Enzymes in Soil, 318
   Role of Microorganisms in the Solubilization of Insoluble
      Phosphates, 318
Role of Mycorrhizal Fungi in the Phosphorus Nutrition of Plants, 321
Inoculation of Soil with “Phosphobacterin,” 323
Modeling of the Soil P Cycle, 323
Summary, 324
References, 325

10 The Sulfur Cycle 330

Biogeochemistry of the Global S Cycle, 332
  Chemical Properties of S, 333
  Origin of S in Soils, 334
  Sulfur Content of Soils, 334
Environmental Aspects of the S Cycle, 335
  Atmospheric Sulfur Dioxide, 335
  Leaching of Sulfate, 336
  Acid Sulfate Soils, 336
  Acid Mine Drainage and Mine Spoil Leachate, 337
Sulfur in Plant Nutrition, 337
Inorganic Forms of Soil S, 339
Organic Forms of Soil S, 340
  Determination of Organic S, 341
  The C/S Ratio, 341
  Chemical Fractionation of Organic S, 342
  Sulfur-Containing Amino Acids, 344
  Lipid S, 346
  Complex Forms of Organic S, 346
  Soluble Forms, 347
  Physical Fractionation, 348
Dynamics of Organic S Transformations, 348
  Factors Affecting the Turnover of Organic S, 349
  Biochemical Transformations of S-Containing Amino Acids, 352
  Microbial Biomass S, 352
  Arylsulfatase Enzymes in Soil, 353
  Use of $^{35}$S for Following Organic S Transformations, 354
  Formation of Volatile S Compounds, 356
  Determination of Plant-Available S, 356
Reduction of S, 357
Oxidation of S, 359
  Practical Importance in Soil, 360
  Species and Metabolism of S-Oxidizing Bacteria in Soil, 360
  General Observations on S Oxidation, 362
Summary, 363
References, 364

11 Micronutrients and Toxic Metals 369

Distribution of Trace Elements in Soils, 371
Forms of Trace Elements in Soil, 373
  Fractionation Schemes, 374
  Borate Complexes with Organic Matter, 376
Speciation of Trace Metals in the Soil Solution, 376
Reactions of Micronutrients with Soil Organic Matter, 379
  Significance of Complexation Reactions, 379
  Properties of Metal–Chelate Complexes, 380
Biochemical Compounds as Chelating Agents, 382
  Organic Acids, 384
  Sugar Acids, 385
  Amino Acids, 385
  Hydroxamate Siderophores, 386
  Phenols and Phenolic Acids, 386
  Polymeric Phenols, 386
  Miscellaneous Compounds, 387
Trace Metal Interactions with Humic and Fulvic Acids, 388
  Solubility Characteristics of Metal–Humate Complexes, 390
  Metal-Ion Binding Capacities, 392
  Effect of pH on Metal-Ion Complexation, 392
  Influence of Electrolytes, 392
Relative Importance of Organic Matter and Clay in Retention of Applied Trace Elements, 393
Reduction Properties, 393
Micronutrient-Enriched Organic Products as Soil Amendments, 394
Dynamics of Micronutrient Cycling by Plants and Microorganisms, 394
  Depletion of Soil Resources Through Cropping, 394
  Influence of Microorganisms, 395
Factors Affecting the Availability of Micronutrients to Plants, 397
  Soil Reserves, 397
  Organic Matter, 397
  pH and Oxidation State, 398
  Rhizosphere, 399
  Seasonal Variations, 399
Role of Organic Matter in the Formation of Spodosols, 399
Micronutrient Requirements of Plants, 401
Deficiency Symptoms and Geochemistry, 402
   Iron, 404
   Zinc, 405
   Manganese, 405
   Copper, 406
   Boron, 406
   Molybdenum, 407
   Cobalt, 407
General Observations, 407
Antagonistic Effects, 408
Trace Elements as Toxic Pollutants, 408
Specific Trace Elements, 410
   Cadmium, 410
   Copper, 410
   Lead, 411
   Mercury, 411
   Arsenic, 411
Soil and Plant Factors Affecting Behavior of Toxic Elements, 412
   Influence of Organic Matter in Ameliorating Al Toxicities, 413
Hyperaccumulation of Trace Elements by Plants, 413
Summary, 414
References, 414
