Control of Particulate Matter Contamination in Healthcare Manufacturing

Thomas A. Barber

Interpharm Press
Denver, Colorado
CONTENTS

PREFACE xi

1. INTRODUCTION AND OVERVIEW 1

   Environmental Particles 2
   Physiologic Effects of Environmental Particulate Matter 3
   Circulatory Transport and Particle Removal 5
   Particles and Patients 7
   Animal Studies 9
   Particle Contaminants in Manufacturing 12
   Classification and Sources of Particulate Matter 12
   Containers and Closures 13
   The IV Therapy Process 14
   Use of In-Line Filters 17
   Detection and Counting of Particles 17
   Subvisible Particle Detection 18
   Particle Control—Standards or GMP? 20
   Standards for Medical Devices 21
   Summary 22
   References 24
The USP <788> Microscopic Test 114
Summary of Microscopic Test 126
Summary 127
Bibliography 129
Appendix I: Vendor and Equipment Information 130
   Particle Counters 130
   Calibration Materials 130
   Light Microscopes 130
   Microfiltration Supplies 131
   Cleanroom Supplies 131
Appendix II: Manufacturers of “USP” Type Circular Area Graticule 131
Appendix III: Sampling Plans 132
   Assay Variability 132
   Sampling Plans 134

5. ENVIRONMENTAL STANDARDS, MANUFACTURING OPERATIONS, AND GOOD MANUFACTURING PRACTICE 139
International Standards for Cleanroom Classification 139
   ISO Document Levels 140
Philosophy of Compliance 143
   The United Kingdom—Complexities in Compliance 145
   Environmental Monitoring and GMP in the United States 145
International Standards 150
   International GMP Documents 151
   The European Community (EC, EEC, EN) GMPs 153
   Standards for General Application: FS-209E 157
   ISO International Standard 14644-1 167
Summary and Conclusion 183
References 184
Appendix I: Good Manufacturing Practice—Related Documents 185
Appendix II: International Contamination Control Standards 186
   Contamination Control Documents from the United States 186
   Contamination Control Documents from Australian Agencies 187
   Contamination Control Documents from Belgian Agencies 189
   Contamination Control Documents from Canadian Agencies 189
   Contamination Control Documents from Chinese Agencies 189
   Contamination Control Documents from English Agencies 189
   Contamination Control Documents from French Agencies 191
   Contamination Control Documents from German Agencies 191
   Contamination Control Documents from Japanese Agencies 191
   Contamination Control Documents from Swedish Agencies 192
   Contamination Control Documents from Swiss Agencies 192
6. REGULATORY PERSPECTIVES RELATED TO THE CONTROL OF PARTICULATE MATTER CONTAMINATION

The FDA

   FDA Concerns with Regard to Particulate Matter

Current Good Manufacturing Practices

Current Regulatory Interests—Drugs and Injectable Products

Current Regulatory Interests—Devices

Environmental Monitoring

Visual Inspection

Quality Control Lab Practice in Particulate Matter Analysis

Preparation for FDA Inspections

Focus of Regulatory Inspections (Subjects for Questions)

   Particulate Matter as a Process Indicator
   Airborne Particulate Matter Monitoring
   Garbing and Personnel Protection
   Medical Devices
   Product Complaints
   Compliance with USP <788> for Solutions
   Visual Inspection
   Overall Response to In-House Particulate Matter Issues
   Liquid Filtration
   Facility Review
   Record Keeping

Inspectional Observations

   Manufacturing Operations
   Personnel Protection
   Laboratory Practice
   Training
   Visual Inspection
   Filter Testing

Summary and Conclusions

References

Compendial Documents

FDA Documents

7. VISUAL INSPECTION OF INJECTABLES AND DEVICES

Visible Particulate Matter as a Quality Attribute

General Considerations in Visual Inspection

   Repeatability of Manual Inspection
   Variables in Human Visual Inspection
   The Probabilistic Detection Principle (Knapp et al.)
   Detection of Particles in Translucent Containers
Contents

Methods of Manual Inspection 250
Applications of Visual Inspection 254

Automated (Machine) Inspection 255

“Essentially Free”—The Concept and the Compendium 261
  Defining “Essentially Free” 263
  Evaluation of Process Capability and Process Control 264
  Compendial Allowances for Particulate Matter 264
  Definition of Allowable Particulate Matter 265
  Best Demonstrated Practice 266

Design of Inspection Methods 266

FDA Expectations for Visual Inspection 268

Visible Particles as Attributes Versus Variables 270

Visual Inspection of Medical Devices 271

Summary 272

References 273

8. LIGHT EXTINCTION PARTICLE COUNTING OF LIQUIDS 275

The USP <788> Method 276

Light Obscuration Sensors 277
  Principles of Operation 277
  Sensor Construction and Function 279
  Laser Versus White Light Obscuration Sensors 282
  Refractive Index Dependency of the LO Measurement 286
  Coincidence Counting 287

“Validation” and “Count Accuracy” 291

Resolution Effects 291
  Sources of Erroneous Count Data 292
  Variability Due to Sampling Effects 296
  Issues Relating to Nonaqueous Vehicles, Color, and Viscosity 296
  Interferences from Subcountable-Sized Particles 298
  Intermittent Instrument Problems 299

Light Obscuration Count Data 300
  Dry Powder Dosage Forms 300
  Amorphous Material 301
  Sample Pooling 302
  Data Variability Versus Sample Volume 302
  User Interpretation of Complex Light Obscuration Count Data 303
  Changes in Calibration Points—Threshold Shift 306

Error Sources Checklist 307
  Laboratory Technique 308
  Cleaning of Glassware 308
  Sampling of Injectable Products 310
Using Particle Size Standards 311
Current Generation Light Obscuration Counters 313
Summary 314
References 315

9. AIRBORNE PARTICLE COUNTING AND ENVIRONMENTAL MONITORING 319
Mechanisms of Airborne Particle Detection 322
Types of Scattering
   Lower Detection Limits of Light-Scattering Instruments 326
Optical Particle Counters
   Light Sources 331
   Function of Collector Optics 331
   Calibration 331
Particle Transport and Sample Acquisition
   Transport of Particles in Tubing 337
Monitoring Methods 340
Remote Systems Analysis—General
   Cost Considerations: Manual Versus Automated Monitoring 344
   Validation of Remote Sampling or Counting 344
Selection of Sampling Plans 346
Numerical Evaluation of Count Data (Bzik 1988, 1994) 349
Sampling of Compressed Gases
   Vapors as a Source of Artifactual Counts 357
Large Particle Monitoring 357
Personnel Monitoring 357
Summary 359
References 360

10. LIGHT MICROSCOPY 363
The Power of Visual Observation 365
The Light Microscope
   Stereomicroscopes 366
   The Compound Microscope 367
Microscopic Visual Descriptors (Morphology)
   Particle Size 373
   Shape 374
   Particle Color 374
   Refractive Index 376
   Reflectivity 376
   Crystals and Crystal Morphology 377
   Fibers 379
Contents

Biologicals 380
Other Morphologically Distinct Particles 382

Polarized Light Microscopy 383
Polarization 383
Interference 383
Construction of the Polarizing Light Microscope 383
Illumination in Polarized Light Microscopy 386
Particle Identification with Polarized Light Microscopy 387
Definitions 389

Morphology and Particle Identification 390
Anisotropic Substances 390
Identification by Refractive Index 390
Dispersion Staining 392
Microchemical and Microphysical Tests 393
Characterization and Sourcing of Mixed Particle Populations 397

Microscope Calibration 398
Isolation and Handling of Particles 399
Summary 399
References 399
Specifications and Standards 401

Appendix:
Descriptions of Photomicrographs of Commonly Encountered Particulate Matter 402
1. Insect Parts 402
2. Rust (Iron Oxide) 403
3. Cosmetic Residue: Talc (Magnesium Aluminum Silicate) and Skin Cells 403
4. Starch 403
5. Paper Fragments 403
6. Teflon® (DuPont) Flakes 403
7. Stopper Fragments (Black Chlorobutyl Rubber) 404
8. Stainless Steel 404
9. Polyethylene (cutting fragment) 404
10. Calcium Carbonate 404
11. Magnesium Phosphate 404
12. Corn Starch 404
13. Filter Membrane Fragments 404
14. Dandruff 405
15. Drug Residue 405
16. Diatoms 405
17. Fungal Hyphae 405
18. Amorphous Material (Drug Residue) 405
19. Hair (Human, Caucasian) 405
20. Rat Hair 406
21. Paper (Coarse, Hardwood) 406
22. Cotton 406
23. Paper and Cotton Mixed 406
## 11. VALIDATION AND ITS APPLICATION TO PARTICLE COUNTING INSTRUMENT SYSTEMS

12. SAMPLING AND COLLECTION OF PARTICULATE MATTER FOR ANALYSIS

Theory of Particle Sampling and Collection

Sampling Guidelines
- Sample Protection
- Sample Container Cleaning

Methods of Collection/Isolation
- Direct Isolation and Manipulation of Particles
- Filtration
- Collection of Particles from Surfaces
- Adhesion and Entrainment

Sedimentation Techniques
- Inertial Collection
- Sieving
- Chemical Isolation Technique

Sampling of Device Parts or Container Components
Sampling of Cleanroom Garments
On-line Sampling
Powder Sampling

Summary

References

Specifications and System Standards

13. APPLICATION AND IN-USE TESTING OF HEPA FILTERS

Principles of HEPA Filtration

Definitions of a “Leak”

In-Use Testing of HEPA Filters

Testing with Polydisperse Dioctyl Phthalate and Other Oils

Photometer Technology

Additional Considerations in the Use of Cold DOP Challenge
- Potential Safety Hazards of DOP
- Test Aerosol Concentration

Variables in Leak Detection (McDonald 1993, 1994a, 1994b)

Alternate Means of Filter Testing in the Pharmaceutical Industry
- Laser Submicrometer Particle Counters in Leak Testing
- Substitute Oil Challenge Materials
