Pharmacology for CHEMISTS

JOSEPH G. CANNON

ACS Professional Reference Book
CONTENTS

I Chemical and Biological Bases of Pharmacology

1 Some General Concepts of Pharmacology 3
   Biological Membranes 3
      Membrane structure 3  Ion channels 4  Fluid mosaic membrane model 7  Some chemical details of membrane structure 7
   Water: Structure and Pharmacological Significance 7
   Drug Dissolution 9
   Penetration of Membranes by Organic Molecules 10
      Passive diffusion 10  Active transport 10  Kinetic terminology 10
      Pinocytosis 10
   Lipophilicity, Hydrophilicity, and Partition Coefficient 11
   Drug Absorption and Transport 11
      Significance of acidity and basicity of drugs 11  Role of villi 12
      Additional factors influencing drug absorption 13  Other possible sites of absorption 14  Drug distribution 14  Drug binding by blood proteins 14
   The Blood–Brain Barrier 16
      Physiology 16  The barrier and small organic molecules 16
      The barrier and proteins and peptides 16  External factors affecting the blood–brain barrier 17
   Transport across the Placental Membrane 17
   Storage Sites for Drugs and Their Metabolites 18

2 Pharmacokinetics 20
   Bioavailability 20
Compartments 20
Clearance 21
Volume of Distribution 22
First-Order Elimination Kinetics 22
Biological Half-Life 23
Model for Combined Absorption and Elimination 25
Nonlinear Pharmacokinetics 25

3 Drug Metabolism 28
Metabolism of Xenobiotics 28
Aspects of Functional Microanatomy of the Kidney 28
Role of the Kidney in Drug Excretion 30
  Glomerular filtration and tubular reabsorption 30
  Tubular secretion 30
  Effect of pH on tubular reabsorption 31
Extrarenal Routes of Drug and/or Drug Metabolite Excretion 31
Undesirable Metabolic Consequences 32
  Lethal synthesis 32
  Poorly soluble metabolites 32
Differences in Metabolic Fate of Enantiomers 33
In Vivo Drug Metabolism 34
  Liver microsomal metabolism 34
  First-pass metabolism 35
  Enzyme induction 35
  Drug disposition tolerance 36
  Inhibition of metabolizing enzymes by drugs 36
Chemical Aspects of Drug Metabolism 37
  Phase I drug metabolism (functionalization reactions) 37
  Phase II drug metabolism (conjugation reactions) 41
Animal Species Differences in Drug Metabolism 43
Human Genetic Variation in Drug Metabolism 44
Age and Sex Differences in Drug Metabolism 45

4 Drug Receptors 46
Receptor Sites and Drug Binding Sites 46
  Definition of terms 46
  Isolation of receptors 47
  Chemical nature of receptors 47
  Drug–receptor interactions 47
  Asymmetric character of receptors: three-point attachment hypothesis 51
Structurally Nonspecific and Structurally Specific Drugs 52
Agonists and Antagonists: Occupancy Theory of Drug Action 53
  Definition of occupancy 53
  Affinity and efficacy 54
  Defects of occupancy theory 55
Agonists and Antagonists: Rate Theory of Drug Action 55
Competitive and Noncompetitive Antagonists 56
Induced Fit 56
Partial Agonists: Inverse (Reverse) Agonists 56
Enzymes as Drug Receptors 57
  Types of enzyme inhibition 57
  Enzyme kinetics in pharmacology 57
  Transition state analogs 58
  Active site-directed irreversible inhibitors 59
  Suicide substrate inhibitors 60
8 The Cholinergic System 116
  Acetylcholine-Inactivating Enzymes 116
  Anatomy/Physiology of the Cholinergic Nerve Terminal 117
  Cholinergic Receptors and Receptor Subtypes 119
    Pharmacological classification 119  Chemical nature of cholinergic
    receptors 120
  Muscarinic Agonists and Partial Agonists 120
  Nicotinic Agonists 121
    Pharmacology of nicotine 121  Possible future therapeutic utility for
    nicotinic receptor stimulants 122
  Indirect-Acting Cholinergic Agents 123
    Inhibitors of acetylcholinesterase and cholinesterase 123  Acetylcholine
    releasing agents 125
  Therapeutic Uses of Cholinergic Receptor Stimulants 126
  Nicotinic Receptor Blockers 127
    Ganglionic blocking agents 127  Myoneural blocking agents 127
  Muscarinic Receptor Blockers 129
    Peripheral effects of muscarinic receptor blockers 129  Central effects
    of muscarinic receptor blockers 131
  Cognitive Dysfunction: Alzheimer's Syndrome 132

9 The Central Nervous System I: Psychotropic Agents 134
  Commonly Used Terms in Central Nervous System Pharmacology 134
  Biochemistry and Physiology of Neurotransmitters in the Central
  Nervous System 135
    Serotonin (5-hydroxytryptamine, 5-HT), bufotenine, melatonin 136
    \( \gamma \)-Aminobutyric acid (GABA) 139  Glutamic acid 140  Glycine 141
    Aspartic acid 142  Adenosine and adenosine phosphate esters 142
    Histamine 143  Gonadal steroid hormones 143  Nitric oxide 143
    Peptide neurotransmitters 144  Physiological interrelationships
    of neurotransmitters 146
  Functions of Some Brain Regions 146
  Animal Screening of Psychotropic Drug Candidates 146
  Antidepressants 149
  Cocaine 151
  Mood-Stabilizing Agent 152
  Antianxiety Agents 153
  Antipsychotic Drugs 155

10 The Central Nervous System II: Sedatives and Hypnotics 159
  Definitions 159
  Rapid Eye Movement Sleep 159
  Ethanol 160
  Non-Barbiturate, Non-Benzodiazepine Sedatives and Hypnotics 160
  Benzodiazepines 161
  Barbiturates 162
    Hangover 162  Pharmacological categories of barbiturates 163
    Barbiturate intoxication 164
11 Analgesics I: Physiological and Biochemical Aspects 166
   Nonnarcotic Analgesics and Nonsteroidal Antiinflammatory Analgesics 166
   Evaluation of Effectiveness of Analgesics in Animals and Humans 167
   Physiological and Biochemical Aspects of Pain Production and Recognition 168
   Nonopioid Analgesics and Nonsteroidal Antiinflammatory Agents 168
   Salicylates 168  The inflammatory syndrome 170  Coal tar analgesics 175  Classification of pain 177  Capsaicin 177

12 Analgesics II: Opioid Analgesics 179
   Terminology 179
   Morphine-Like Analgesics 179
   Opioid Drug Antagonists 183
   Analgesic Receptors 184
   Endogenous Analgesic Receptor Agonists 185
   Analgesic Mechanisms of Endorphins and Opioids 186
   Opioid and Analgesic Peptide Tolerance and Dependence 187
   Physiological Implications of the Existence of Endogenous Analgesic Substances 188

13 General and Local Anesthetics 189
   General Anesthetics 189
   Inhalation anesthetics 189  Intravenous anesthetics 192
   Local Anesthetics 193

III Pharmacology of Some Peripheral Organ Systems

14 The Cardiovascular System I: Anatomy and Physiology, Hypertension, Hyperlipidemia/Atherosclerosis, and Myocardial Infarction 199
   Aspects of Functional Anatomy of the Heart 199
   Hypertension 201
      Physiological regulation of blood pressure 201  Clinical categories of hypertension 203  Therapeutic challenges and strategies in hypertension 204  Antihypertensive drugs 204
   Hyperlipidemia/Atherosclerosis 209
      Pathology 209  Chemistry and physiology of lipoproteins 210  Therapy of hyperlipidemia 211
   Myocardial Infarction 213
      Physiology of blood coagulation 213  Anticoagulant drugs 214  Thrombolytic drugs 216  Antiplatelet drugs 216

15 The Cardiovascular System II: Arrhythmias and Myocardial Ischemia 218
   Arrhythmias 218
      Pathology 218  Drug therapy of arrhythmias 219
   Myocardial Ischemia 222
      Aspects of pathology and etiology 222  Antianginal therapy 224
16 The Cardiovascular System III: Congestive Heart Failure; Diuretics 229
   Congestive Heart Failure 229
      Etiology 229  Structure and gross pharmacological effects of cardiac
      glycosides 230  The digitalis receptor 231  Aspects of the mechanism of
      action of cardiac glycosides 231  Pharmacologically significant physical
      properties of cardiac glycosides 232  Clinical aspects of cardiac
      glycosides 233  Miscellaneous agents for treating congestive
      heart failure 233
   Diuretics 234
      Aspects of renal anatomy and physiology: Urine formation 234  Diuretics
      and methods of producing diuresis 234

17 Pharmacology of Histamine-Implicated Diseases: Allergy, Asthma,
   and Gastric Hypersecretion 242
   Allergy 242
      The immune response 242  Histamine-derived allergic reactions 243
      Histamine H₁ receptors in allergy 244  Anaphylaxis 245
      H₁ antagonists in therapy 245
   Bronchial Asthma 247
      Physiology 247  Drug therapy of asthma 248
   Gastric Hypersecretion 250
      Aspects of Gastrointestinal Physiology 250  Peptic ulcer 251  Drug
      therapy of peptic ulcer 251

Glossary 255
