A note about drug nomenclature viii
Consulting authors ix

SECTION ONE
Clinical pharmacology: the scientific basis of drug therapy

1 The four processes of drug therapy
  1.1 The pharmaceutical process 4
  1.2 The pharmacokinetic process 5
  1.3 The pharmacodynamic process 5
  1.4 The therapeutic process 5

2 The pharmaceutical process: is the drug getting into the patient?
  2.1 Patient compliance/concordance 7
  2.2 Systemic availability (bioavailability) 8
  2.3 Special drug formulations 9

3 The pharmacokinetic process: is the drug getting to its site of action?
  3.1 Drug absorption and systemic availability 13
  3.2 Drug distribution 15
  3.3 Drug metabolism 17
  3.4 Drug excretion 19
  3.5 Simple pharmacokinetic calculations 20
  3.6 The mathematics of pharmacokinetics 29

4 The pharmacodynamic process: is the drug producing the required pharmacological effect?
  4.1 The types of pharmacological actions of drugs 35
  4.2 Stereoisomerism and drug action 42
  4.3 Graded responses to drugs: the dose-responsive curve in drug therapy 43

5 The therapeutic process: is the pharmacological being translated into a therapeutic effect?
  5.1 Translation of the pharmacological effect of a drug into a therapeutic effect during short-term drug therapy 47
  5.2 Translation of the pharmacological effect of a drug into a therapeutic effect during long-term drug therapy 50
  5.3 The aims of drug therapy 53

6 Practical applications of the analysis of drug therapy
  6.1 The application of pharmacokinetics to the planning of drug dosage regimens 57
  6.2 The application of the processes of drug therapy in analysing failure to respond to treatment 61

7 Monitoring drug therapy
  7.1 Monitoring the therapeutic effects of drugs 68
  7.2 Monitoring the pharmacodynamic effects of drugs 69
  7.3 Monitoring drug pharmacokinetics (plasma concentration measurement) 71
SECTION THREE
The drug therapy of disease

21 Introduction to drug therapy 197

22 The drug therapy of infectious diseases
   22.1 Antibacterial drugs: the treatment of bacterial infections 200
   22.2 Chemotherapy of viral infections 210
   22.3 Chemotherapy of protozoal infections 214
   22.4 Chemotherapy of helminthic infections 218
   22.5 Chemotherapy of trematode infections 218
   22.6 Chemotherapy of fungal infections 218
   22.7 Prevention of infections using vaccines and immunoglobulins 220
   22.8 The drug treatment of sexually transmitted diseases 222

23 The drug therapy of cardiovascular disorders
   23.1 Hypertension 226
   23.2 Angina pectoris 233
   23.3 Acute myocardial infarction 236
   23.4 Cardiac arrhythmias 241
   23.5 Cardiac failure 248
   23.6 Infective endocarditis 253
   23.7 Venous thromboembolic disease 255

24 The drug therapy of respiratory diseases
   24.1 The use of oxygen in respiratory disorders 260
   24.2 Cough 260
   24.3 Pneumonias 261
   24.4 Chronic obstructive lung disease 263
   24.5 Bronchial asthma 263
   24.6 Pulmonary tuberculosis 270
   24.7 Inflammatory lung disorders 272
   24.8 Cystic fibrosis 273
   24.9 Drug-induced respiratory disorders 273

25 The drug therapy of gastrointestinal, hepatic, and biliary disorders
   25.1 Antacids 276
   25.2 Antiemetics 277
   25.3 Peptic ulceration 279
   25.4 Laxatives 282
   25.5 Antidiarrhoeal drugs 283
   25.6 Irritable bowel syndrome 284
   25.7 Gastrointestinal infections 284
   25.8 Ulcerative colitis 285
   25.9 Crohn's disease 287
   25.10 Drugs and the liver 288
   25.11 Drug therapy in the treatment of chronic liver disease 291
   25.12 Drug treatment of gallstones 292

26 Drugs and the kidney and the drug therapy of renal, urinary tract, and prostatic disorders
   26.1 Diuretic therapy 296
   26.2 Potassium depletion 300
   26.3 Hyperkalaemia 301
   26.4 The place of drugs in the management of acute renal insufficiency 301
   26.5 The place of drugs in the management of chronic renal insufficiency 302
   26.6 The drug treatment of glomerulonephritis 305
   26.7 Drugs in the treatment of urinary tract infection 306
   26.8 Drug treatment of urinary calculi 307
   26.9 Drugs and the urinary bladder: the treatment of incontinence, detrusor instability, and enuresis 307
   26.10 Drug therapy of tumours of the kidney 308
   26.11 Drug therapy of prostatic disease 308
   26.12 Drug-induced renal damage 309
   26.13 Drugs and dialysis 310

27 The drug therapy of endocrine and metabolic disorders
   27.1 Disorders of the pituitary gland 313
   27.2 Disorders of the adrenal gland 316
   27.3 Disorders of the thyroid gland 318
   27.4 Disorders of calcium metabolism 321
   27.5 Diabetes mellitus 324
   27.6 Disorders of lipid metabolism 333
   27.7 The management of obesity 337

28 The drug therapy of blood disorders
   28.1 Anaemias 339
   28.2 Myeloproliferative disorders 342
   28.3 Lymphoproliferative disorders 343
   28.4 Acute leukaemias 344
   28.5 Monoclonal gammopathies 345
   28.6 Drug-induced blood dyscrasias 346
   28.7 Complications of blood transfusion 348
   28.8 Blood substitutes 349

29 The drug therapy of disorders of bones and joints
   29.1 Arthritis 351
   29.2 Gout and hyperuricaemia 358
   29.3 Musculoskeletal disorders caused by drugs 360
   29.4 Paget's disease of bone 360
   29.5 The prevention and treatment of postmenopausal osteoporosis 362
## 30 The drug therapy of neurological disorders

30.1 Meningitis and encephalitis 363
30.2 Parkinson’s disease and Parkinsonism 365
30.3 Epilepsy 367
30.4 Migraine 370
30.5 Myasthenia gravis 372
30.6 Muscle spasticity 374
30.7 Vertigo 375
30.8 Trigeminal neuralgia 376
30.9 Drug-induced movement disorders 376

## 31 The drug therapy of psychiatric disorders

31.1 Mechanisms of action of drugs used in psychiatric disorders 377
31.2 The use of psychotropic drugs 380

## 32 The relief of pain

32.1 Anatomical and neuropharmacological mechanisms underlying pain sensation 389
32.2 Mechanisms of action of analgesics 390
32.3 Principles underlying the use of analgesics in the treatment of pain 391
32.4 The practical use of analgesics 393
32.5 The treatment of intractable pain in terminal malignant disease 395
32.6 Postoperative pain 396

## 33 General anaesthesia and local anaesthetics

33.1 Premedication 398
33.2 Induction of anaesthesia 398
33.3 Muscle relaxants 398
33.4 Maintenance of anaesthesia 400
33.5 Postoperative medication 404
33.6 Local anaesthetics 405

## 34 Drug dependence and abuse

34.1 Factors that predispose to drug dependence 411
34.2 Opiates 412
34.3 Cocaine and amphetamines (including Ecstasy) 414
34.4 Cannabis 415
34.5 LSD and other psychedelic drugs 416
34.6 Solvents and nitrites 416
34.7 Alcohol 416
34.8 Benzodiazepines 417
34.9 Barbiturates 418
34.10 Anabolic steroids 418
34.11 Tobacco (nicotine) 418
34.12 Accounts of drug dependence 419

## 35 The management of poisoning

35.1 The immediate management of the acutely ill patient 499
35.2 The detailed management of poisoning 499
35.3 Sources of information 499
35.4 Agents used in the treatment of poisoning 499

## 36 The principles of cancer chemotherapy

36.1 Tumour responsiveness to chemotherapy 438
36.2 The actions of chemotherapeutic drugs relevant to the clinical uses 439
36.3 Clinical evaluation of tumours before and after treatment 442
36.4 Combination chemotherapy 442
36.5 Regimens for cancer chemotherapy 442
36.6 Adverse effects of drugs used in cancer chemotherapy 442
36.7 The practical use of cytotoxic drugs 444

## 37 Immunosuppression and the drug therapy of allergies, connective tissue disorders, and primary immunodeficiencies

37.1 Immune disease: pathogenesis and mechanisms of action of drugs 447
37.2 The use of glucocorticoids as anti-inflammatory, antiallergic, and immunosuppressive agents 450
37.3 The drug therapy of allergic and autoimmune disorders 452
37.4 The management of primary immunodeficiencies 454
37.5 Immunosuppression in tissue and organ transplantation 455
