Induction Motors

Analysis and Torque Control

With 41 Figures
and 50 diagrams (simulation plots)
3.8.2 Torque

3.8.3 Order of Magnitude of Variables in a Current-Source Line-Fed Induction Motor

3.8.4 Current-Source Line-Fed Induction Motors at Start-Up

3.9 Negative-Sequence Applied Voltages

3.10 Induction Motors Fed from Unbalanced Voltage Source

3.11 Asymmetric Three-Phase Induction Motors in Steady-State Regimes

4 Steady-State Single-Phase Induction Motors

4.1 Introduction

4.2 Equations for Single-Phase Motors

4.3 Line-Fed Single-Phase Induction Motors

4.4 Equivalent Circuit

4.5 Determination of the Equivalent Circuit Parameters

5 Induction Motors in Transient Regimes

5.1 Introduction

5.2 Operating Equations in Transient Regimes

5.3 Transient Analysis in the Time Domain

5.4 Transient Analysis in the Frequency Domain

5.5 Examples of Simulation

5.5.1 Start-Up from Standstill
5.5.2 Take-Over of a De-Energized Motor ...................105
5.5.3 Inverter-Fed Induction Motors with Frozen Power
Switches ...................................................105

6 Inverter-Fed Induction Motors

6.1 Introduction .............................................109
6.2 Voltage-Source Inverters .................................110
6.3 Natural Pulse Pattern of Inverters .......................112
  6.3.1 Natural Pulse Pattern of a Two-Level Inverter ....112
  6.3.2 Natural Pulse Pattern of a Three-Level Inverter ...113
6.4 Scanning Modes ...........................................115
  6.4.1 Periodic Scanning Modes - Output Waveforms ....115
6.5 Spectral Analysis of Periodic Waveforms - Total Harmonic
  Distortion ..................................................117
6.6 Space Vector Modulation ................................118
  6.6.1 Basic Idea ...........................................118
  6.6.2 Uniform Waveforms Obtained Using Space Vector
        Modulation ...........................................121
  6.6.3 Required Switching Frequency .......................122
  6.6.4 Output Current Waveforms .........................123
6.7 Voltage Space Vector Applied Across the Load ..........124
  6.7.1 Y-Connected Load ...................................124
  6.7.2 Δ-Connected Load ...................................124
6.8 Harmonics ................................................125
6.9 Voltage Harmonics .......................................126
  6.9.1 Harmonic Components of Single-Pulse
        Waveforms ...........................................126
  6.9.2 Harmonic Components of P-Pulse Waveforms ......128
  6.9.3 Harmonic Components of Uniform Waveforms .......130
  6.9.4 Harmonic Components of Quasi-Uniform
        Waveforms ...........................................137
  6.9.5 Harmonic Components of Modulated Waveforms ..142
6.10 Current Harmonics ......................................148
  6.10.1 Current Harmonics in Various Load Phases ......148
  6.10.2 Current Harmonics of Input Lines ................149
6.11 Current-Source Inverters ................................150

7 Induction Motors Torque Control

7.1 Introduction .............................................157
7.2 Vector Control ...........................................158
7.2.1 Principle of the Computed Charge Acceleration Method (C.C.A.M) ................................................................. 159
7.2.2 Implementation of the C.C.A.M .................. 162
7.2.3 Other Vector Control Approaches ............ 168
7.2.4 Vector Control Simulation Results ............ 170

7.3 Scalar Control ............................................................ 179
7.3.1 Scalar Control Principle ........................... 180
7.3.2 Scalar Control Operating Conditions .......... 182
7.3.3 Scalar Control Simulation Results ............ 190

7.4 Evaluation of the Stator and Rotor Resistance .... 198

7.5 Principle of Speed Calculation ..................... 202
7.6 Speed Regulation ..................................................... 203

Appendix A
Field-Oriented Control

A.1 Introduction ...................................................... 205
A.2 Preliminary Investigations ................................... 205
A.3 Field-Oriented Control ......................................... 207

Appendix B
Direct Torque Control

B.1 Introduction ...................................................... 213
B.2 Direct Torque Control Principle ........................ 213

Appendix C
Double-Cage Induction Motors

C.1 Introduction ...................................................... 217
C.2 Voltage Equations in Double-Cage Induction Motors .... 217
C.3 General Equivalent Circuit of Double-Cage Induction Motors ............... 219
C.4 Steady-State Equivalent Circuit of Double-Cage Induction Motors ......... 222

Appendix D
Transient Analysis in Single-Phase Induction Motors

D.1 Introduction ...................................................... 225
D.2 Transients in Three-Phase Induction Motors ......... 225
D.3 Transients in Single-Phase Induction Motors ......... 227
