W. Möhlenbrink, M. Bargende, U. Hangleiter, U. Martin (Eds.)

Proceedings

NETWORKS FOR MOBILITY

International Symposium
September 18 - 20, 2002
Stuttgart, Germany

Volume I
Topics A and B

University of Stuttgart
Centre of Transportation Research (FOVUS)
A – Infrastructure and Mobility

A1 – Efficient use of infrastructure

Efficiency in public transport (I.A1)
Wolfgang Arnold 1

Traditional and new management philosophies for urban passenger transportation in Colombia (Plen. III)
Klaus Banse 10

Modelled effects on the road network by large-scale cost effective mobility management (TravelSmart®) (I.A1)
Werner Brög, Bruce James, Peter Lawrence 20

Integrating evaluation and planning – optimisation step by step (I.A1)
Harry Dobeschinsky 32

Transport and infrastructure economy and policy (Plen. I)
Gerhard Heimerl 40

Slow vehicle traffic is a more attractive alternative to fast vehicle traffic than public transport (IV.A1)
Gert Marte 46

Speed elasticity of mileage demand (IV.A1)
Rudolf Pfleiderer, Martin Dieterich 55

Intelligent Transport Systems. Regional effects based on case studies (IV.A1)
Joana Maria Seguí Pons 64

Aims and indicators for operationalisation of a sustainable mobility (I.A1)
Ulf Surburg 74

A2 – Evaluation and financing

Private-public partnership financing: a profitability rate paradox (Plen. IV)
Alain Bonnafous 87

Does optimal evaluation lead to optimal transport? (Plen. IV)
Heinrich Brändli 95
TravelSmart® – Large-scale cost effective mobility management: Experiences from Perth, Western Australia (III.A2)
*Bruce James, Werner Brög*

European transport policy – matching prices with costs (Plen. IV)
*Chris Nash, Bryan Matthews*

Charging systems for the use of transportation infrastructure (Plen. V)
*Werner Rothengatter*

Problems and solutions of privately financed infrastructure (III.A2)
*Katalin Tánczos*

Toward a welfare optimal planning of infrastructure (III.A2)
*Floris W.C.J. van de Vooren*

### A3 – Linking vehicles and infrastructure

Environment perception by computer vision and sensor fusion (II.A3)
*Uwe Franke, Gabi Breuel, Axel Gern*

Required information for future driver assistance systems (II.A3)
*Franz G. Grein, Ralf Schuler, Andreas Schulz, Jochen Wiedemann*

Safety-enhancement for traffic management by vehicle-infrastructure coupling (Plen. II)
*Wolfgang Möhlenbrink*

Vehicles as mobile sensors (II.A3)
*Jochen Wiedemann*

A concept to describe and evaluate the information quality in driver assistance systems (II.A3)
*Thomas Wilschko*
B – Integrated Traffic Networks

B1 – Intermodal systems

Integrated transport planning (I.B1)
Jan Bumewicz, Elzbieta Adamowicz 195

Notions of intermodality in inter-city passenger transport (I.B1)
Jörg Last, Wilko Manz 206

Advanced logistic solutions for Danube waterway
ALSO DANUBE (V.B1)
Wolfgang Pfaff 215

Integration in the transport chain (Plen. I)
Hans Rat 222

Policy options to increase the competitiveness of intermodal goods transport (V.B1)
Andrea Ricci 227

Modified mobility behaviour at the new residence? The role of information in changing the choice of transportation moving to a new city (I.B1)
Daniel Rölle, Christoph Weber, Sebastian Bamberg 236

Shamrock-Hub – A new container based transportation system (V.B1)
Horst J. Roos 244

Marginal external costs of intermodal goods transport in Europe: a comparison to all-road goods transport (V.B1)
Stephan A. Schmid, Peter Bickel, Rainer Friedrich 254

Flexible mobility: Mental integration of networks (I.B1)
Meinte A. Wildschut 269

B2 – Coverage of Information

Traffic information in public transport using high quality vehicle positioning (III.B2)
Roland Bettermann 279

NEXUS – Integrating data and services for mobile users of location based applications (III.B2)
Dieter Fritsch, Darko Klinec, Steffen Volz 286
## Contents

GIS as a tool to exchange information on transportation planning and management (Plen. II)
*Hideo Nakamura*  
294

Design and engineering of information services. The need to link to and integrate the customer (III.B2)
*Heiner Schmeck*  
300

Cost factors of combining different spatial databases for traffic applications (III.B2)
*Martin Stark*  
309

### B3 – Traffic management / Traffic modelling

Towards benchmarking microscopic traffic flow models (II.B3)
*Elmar Brockfeld, Reinhart Kühne, Peter Wagner*  
321

New ways to ensure mobility – integrated traffic control center (IV.B3)
*Stefan Denzinger*  
332

Traffic management at airports (Plen. II)
*Georg Fundel*  
339

Charging rail operators for delays – how not to do it (IV.B3)
*Haldor E. Jochim*  
341

Traffic management 2010 (II.B3)
*Peter Konhäuser*  
350

Long-distance commuting and secondary induced traffic (II.B3)
*Matthias Lenz, Walter Vogt, Frank Kalter*  
357

Deviation management in rail operation (IV.B3)
*Ullrich Martin*  
368

ITS for sustainable mobility: The importance of networks (Plen. V)
*Vito Mauro*  
378

Integrated traffic state estimation and automatic incident detection using traffic flow modelling (II.B3)
*Jürgen Maier, Herbert Wehlan*  
384

Parking management (IV.B3)
*Wolfgang Senk*  
394
C – Traffic and the Environment
(in Volume II)

C1 – Impacts on the environment

Environmental impact of electric vehicles: analysis and comparison (V.C1)
Salvatore Amoroso, Silvia Salerno, Pietro Zito 401

Fuel cell or internal combustion engine, will it really be an “or” in future powertrains (Plen. III)
Michael Bargende 412

Traffic and air pollution in Stuttgart (IV.C1)
Jürgen Baumüller, Ulrich Reuter 425

Noise abatement planning as an instrument against environmental nuisances caused by traffic – Experiences and problems with the creation of a measure plan (V.C1)
Jürgen Baumüller, Thomas Schene 433

Pedestrian: the human mode of transport (IV.C1)
Tilman Bracher 441

Emissions of air pollutants from transport and their impacts on environment and human health (IV.C1)
Rainer Friedrich, Stefan Reis, Thomas Pregger, Roland Krüger 452

Integrated transportation and environmental planning (Plen. III)
Giselher Kaule 461

Future mobility patterns and scenarios of the long-term development in transport (V.C1)
Reinhart D. Kühne, Volker Schmid 473

Requirements for future sustainable transport (Plen. V)
Rudolf Petersen 481

Urban sprawl and climate protection: Are gentlecars an opportunity? (V.C1)
Monika Reiher, Heinz-Jörg Reiher 484

Migration corridors for wildlife – another network of mobility (IV.C1)
Mark Woess, Roland Grillmayer 494
C2 – Models for evaluating the effects

The application of the ecological footprint: A case of passenger transport in Merseyside (II.C2)
John Barret 507

Sustainable transport planning through strategic environmental assessment (I.C2)
Thomas B Fischer 518

New patterns of mobility – substitution, complement or induction ? (II.C2)
Barbara Lenz 532

Individual activity pattern variation and reactions to planning measures (II.C2)
Oliver Lipps 539

Physical and virtual mobility: attempt of a theoretical model construction and first empirical findings (II.C2)
Torsten Luley 551

Modeling and evaluating environmental stress based on traffic – a loop based controlling approach (I.C2)
Markus Müller 559

An analytical framework for assessing the spatial and economic impacts of transport network improvements – the Egnatia motorway case study (IV.A1)
Stefano Panebianco, Carsten Schümann 569

A method for evaluation and optimisation of noise-reducing measures on railways (I.C2)
Ulrich Rückert 580

Preliminary study of the estimation procedure of environmental impacts under cost benefit analysis for the construction of roads and railways in Japan (I.C2)
Atsushi Terazono, Yuichi Moriguchi, Keisuke Matsuhashi 591

C3 – Spatial development / Traffic and urban planning

Chances and limits of a transit-oriented (settlement) development (Plen. I)
Klaus J. Beckmann 601
