Understanding Pharmacy Calculations

Teresa A. O'Sullivan, PharmD, BCPS
Director, Experiential Education
University of Washington School of Pharmacy
Seattle, Washington

American Pharmaceutical Association
Washington, D.C.
Contents

Preface ix

1 Things You'll Use Every Day 1
  Measurement Systems 1
  Converting between Measurement Systems 3
  Thermometry 7
  Setting Up Calculations 8
  Abbreviations Used on Prescriptions 10
  Interpreting the Directions 13
  Composing the Label Instructions 16
  Other Abbreviations You Will See in Practice 17
  Practice 20
  Answers 26

2 Understanding Expressions of Drug Amounts 29
  Units 29
  Parts 30
  Concentration 31
  Percent Ionization 43
  Recognizing Acids and Bases 52
  Practice 54
  Answers 60

3 Calculations Used When Compounding Medications 67
  Common Words Used in the IV Room 68
  Osmolarity 71
  Isotonicity 73
  Diluting and Concentrating 75
  The Algebraic Method 76
  The Alligation Method 79
  Aliquot Measurement Calculations 82
  Buffer Systems 86
  Going Further: More about Your Body's Buffer System 92
  Practice 96
  Answers 103
4 Calculations to Determine Patient-Specific Doses ("The Right Dose") 113

Dosing 113
Body Weight Considerations 118
Body Surface Area 120
Infusion Rate Dosing Calculations 124
Easing Patients into and out of Doses: Tapering and Desensitization 124
Pharmacokinetic Dosing Calculations 127
Beyond Algebra 131
Practice 133
Answers 139

5 Parenteral Nutrition Calculations 143

Components of a TPN 143
Two Ways to Mix TPNs 148
TPN Calculations 148
Mixing TPNs Using the Pump Method 149
Mixing TPNs Using the Preset Volume Method (Traditional) 156
TPN Worksheet 160
Practice 181
Answers 210

Practice Practice Practice 239

Alpha Practice/Answers 241
Beta Practice/Answers 248
Gamma Practice/Answers 255
Delta Practice/Answers 262
Epsilon Practice/Answers 269
Zeta Practice/Answers 276
Eta Practice/Answers 283
Theta Practice/Answers 290
Iota Practice/Answers 297
Kappa Practice/Answers 304
