5 Diacylglycerols
HIROYUKI WATANABE AND NOBORU MATSUO

A. Introduction 113
B. Biochemical characteristics of DAG 114
   1. Occurrence of DAG
   2. Structure of DAG
   3. Energy value of DAG
   4. Absorption coefficient of DAG
C. Nutritional functions of DAG as studied in animals 118
   1. Identification of the digestion products in the small intestine
   2. Re-esterification rate
   3. Anti-obesity effects of DAG in animal studies
4. Long-term effects of DAG ingestion on the proteins and enzymes involved in lipid metabolism

D. Clinical studies
1. Double-blind controlled study on the effects of dietary DAG on postprandial serum and chylomicron TAG responses in healthy humans
2. Dynamics of postprandial remnant-like lipoprotein particles (RLP) in serum after DAG ingestion
3. Dietary DAG suppresses the accumulation of body fat in men: a double-blind controlled trial
4. Long-term ingestion of dietary DAG lowers serum TAG levels in type II diabetic patients with hypertriglyceridemia
5. The solubilization of phytosterols in DAG instead of TAG oil improves their serum cholesterol-lowering effect

E. Applications of DAG
