# Contents

**Chapter 1** The Regulatory Requirements for Validation in the Pharmaceutical Industry

1.1 The Regulatory Requirements of Good Manufacturing Practice (GMP) ................................................. 1

1.1.1 Buildings and Facilities ........................................... 4

1.1.1.1 GMP Principles .................................................. 5

1.1.2 Equipment .......................................................... 9

1.1.2.1 GMP Principles .................................................. 9

1.2 The Relationship between Validation and GMP ................................................................. 12

1.2.1 Compliance .......................................................... 12

1.2.2 Quality Assurance ................................................. 15

1.2.3 Economics .......................................................... 15

1.3 The Impact of Changing Regulations on the Scope and Extent of Validation .................. 16

1.4 The Future of GMP .................................................................. 18

References .............................................................................. 20

**Chapter 2** The Fundamentals and Essentials of Validation ..................................................... 23

2.1 Validation Concepts, Definitions, and Terminology ............................................................. 23

2.2 The Philosophy and Key Principles of Validation ................................................................. 23

2.2.1 The Life-Cycle Approach to Validation ................................................. 23

2.2.2 Qualification Practices ............................................................................. 24

2.3 Organizing and Planning for Validation ............................................................................. 26

2.3.1 Organizing for Validation ................................................. 26

2.3.2 Planning for Validation ................................................. 33

2.4 The Essential Validation Disciplines ............................................................................. 35

References .............................................................................. 37

**Chapter 3** The Practice of Facility Validation ............................................................................. 39

3.1 A Typical Life-Cycle Approach for the Qualification and Validation of a Pharmaceutical Manufacturing Facility ......................................................... 39

3.1.1 The Requirements and Specification Phase ................................................. 39

3.1.2 Validation Planning ............................................................................. 41

3.1.3 The Validation Project Team ............................................................................. 42

3.1.4 Facility Systems GMP Audit, Design Qualification, and Impact Assessment ............................................................................. 42

3.1.5 Factory Acceptance Tests (FATs) and Predelivery Inspections (PDIs) ............................................................................. 44
Chapter 4  Twenty Tools Recommended for Facility Validation

4.1 Common Problems Associated with Facility Validation

4.2 Good Validation Practice

4.3 Step 1: Structure the Project Team Appropriately; Define Functions, Roles, and Responsibilities

4.3.1 Project Team Structure

4.3.2 Project Team Function

4.3.3 Project Team Roles and Responsibilities

4.4 Step 2: Get Project Team Buy-In

4.5 Step 3: Educate Project Team

4.6 Step 4: Involve Quality Assurance

4.7 Step 5: Encourage Greater End-User/Stakeholder Participation

4.8 Step 6: Conduct Quality Compliance Audits of Prospective Vendors

4.9 Step 7: Give Vendors the Information Needed to Succeed

4.10 Step 8: Define Validation Scope; Conduct Impact Analysis Early

4.11 Step 9: Develop a Robust Validation Master Plan

4.12 Step 10: Integrate Validation Schedules into the Overall Project Schedule

4.13 Step 11: Adopt Formal Commissioning Procedures

4.14 Step 12: Standardize Validation Approach SOPs/Guidelines; Educate Validators

4.15 Step 13: Avoid Duplicate Testing; Integrate Commissioning with Validation Activities

4.16 Step 14: Formalize Turn-Over Process and Turn-Over Package Documentation Requirements

4.17 Step 15: Begin Facility-Related Compliance Programs Early

4.18 Step 16: Enhance Documentation and Documentation Management Practices

4.19 Step 17: Conduct Periodic Design and Construction Reviews

4.20 Step 18: Hand-Over and Train End Users in Validated Systems

4.21 Step 19: Develop a Revalidation Strategy to Maintain a Validated System or Equipment

4.22 Step 20: Continuously Improve and Maintain Validation Practices; Reapply Lessons Learned from Previous Projects
