Contents

Chapter 1
Guidelines to Process Validation ............................................. 1
Gail Sofer

Chapter 2
Applications of Failure Modes and Effects Analysis to
Biotechnology Manufacturing Processes .................................. 13
Robert J. Seely and John Haury

Chapter 3
Process Characterization ....................................................... 31
James E. Seely

Chapter 4
Scale-Down Models for Purification Processes:
Approaches and Applications ................................................ 69
Ranga Godavarti, Jon Petrone, Jeff Robinson,
Richard Wright, and Brian D. Kelley
Chapter 5
Adventitious Agents: Concerns and Testing for Biopharmaceuticals ................................................................. 143
Ray Nims, Esther Presente, Gail Sofer, Carolyn Phillips, and Audrey Chang

Chapter 6
Life Span Studies for Chromatography and Filtration Media .............................................................................. 169
Anurag S. Rathore and Gail Sofer

Chapter 7
Validation of a Filtration Step ................................................. 205
Jennifer Campbell

Chapter 8
Analytical Test Methods for Biological and Biotechnological Products ............................................................. 277
Nadine Ritter and John McEntire

Chapter 9
Facility Design Issues — A Regulatory Perspective ........................................ 327
Nancy Roscioli and Susan Vargo

Chapter 10
Validation of Computerized Systems ........................................ 395
Monica J. Cahilly

Chapter 11
Process Optimization and Characterization Studies for Purification of an E. coli-Expressed Protein Product ................................................................. 451
Anurag S. Rathore

Chapter 12
Validation of the ZEVALIN® Purification Process — A Case Study ................................................................. 469
Lynn Conley, John McPherson, and Jörg Thömmes
