## Contents

Preface ix  

1 An overview of dietary supplements and functional foods 1  
   The evolving rationale for supplement use 1  
   Adequacy and the prevention of deficiency diseases 1  
   Diet as a means to prevent chronic, age-related and wealth-related diseases 3  
   Supplements versus dietary change for the prevention of chronic disease 4  
   Dietary supplements and natural remedies as a safer alternative to modern medicine? 7  
   Defining dietary supplements 8  
   Legal regulation of dietary supplements (UK perspective) 9  
      Medicines 9  
      Non-medicinal supplements 10  
      Health claims 10  
   Legal regulation – the European (EU) dimension 11  
   Regulation in the USA 13  
   Supplement quality 14  
   The market for supplements 15  
   Reasons for taking supplements 16  
      To compensate for a perceived or potential inadequacy in the diet 16  
      To compensate for some perceived increase in need or defective handling of a nutrient 17  
      To treat or prevent non-deficiency diseases 18  
      To improve athletic performance 19  
   Do supplements and functional foods work? Testing their effectiveness and safety 20  
   Measures of outcome 20  
   The two main investigative approaches 21  
      The observational approach 21  
      The experimental approach 27  
   Testing – a summing up 35  

2 An overview of micronutrient adequacy 38  
   Introduction and scope of the chapter 38  
   Judging the adequacy of micronutrient intakes 38
Contents

Recommended daily allowances on food labels 41
Measuring an individual’s micronutrient status using clinical or biochemical observations 41
Micronutrient adequacy of the UK population 43
  Young and middle-aged adults 45
  Children 49
  Pregnant women 51
  Lactating women 54
  The elderly 55
  Athletes in training 58
Summing up 59

3 The individual vitamins 61
  The fat soluble vitamins 61
    Vitamin A (retinol) 61
    Vitamin D (cholecalciferol) 66
    Vitamin E (α-tocopherol) 68
    Vitamin K (phyloquinone) 69
  The water soluble vitamins 71
    Vitamin B₁ (thiamin) 71
    Vitamin B₂ (riboflavin) 72
    Vitamin B₃ (niacin) 73
    Vitamin B₆ (pyridoxine) 74
    Vitamin B₁₂ (cobalamins) 76
    Folic acid (folate, folacin) 77
    Biotin 80
    Pantothenic acid 80
    Vitamin C (ascorbic acid) 81

4 The minerals 84
  Calcium 86
  Chromium 90
  Copper 91
  Fluoride 92
  Iodine 94
  Iron 96
  Magnesium 99
  Manganese 101
  Molybdenum 102
  Potassium 102
  Selenium 104
  Zinc 104

5 Free radicals and antioxidants 107
  Introduction 107
Contents

The free radical or oxidant theory of disease 108
Mechanisms for limiting free radical damage 110
Diets with plentiful supplies of (antioxidant-rich) fruit and vegetables are associated with reduced risk of chronic diseases 113
What evidence is there that antioxidant supplements are beneficial or at least harmless? 114
Vitamin E and dementia 118
Summing up the case for antioxidant supplements 119

6 Natural fats and oils 121
The nature of fats, oils and other lipids 121
Why are we preoccupied with the balance of our dietary fats? 123
Why some fatty acids are called ‘essential’ 124
Essential fatty acids and eicosanoid production 128
Fish oil supplements 129
What are the suggested benefits of taking fish (liver) oil supplements? 131
Fish oil supplements – evidence of effectiveness 132
Evening primrose oil and other sources of GLA 134
Flaxseed oil 135
Conjugated linoleic acid 136
β-Sitosterol and the phytosterols 139

7 Non-essential ‘nutrients’ that are used as dietary supplements 141
General rationale 141
Glucosamine and chondroitin sulphate 143
Nature and functions of cartilage 143
Supplement forms and origins 144
Rationale for use and evidence of effectiveness 145
S-adenosylmethionine 147
Nature and functions 147
Rationale for use and evidence of efficacy 147
Lecithin and choline 149
L-carnitine 150
Nature and synthesis of L-carnitine 150
Functions of carnitine 151
Circumstances that may increase carnitine requirements 152
Use of carnitine supplements 153
Carnitine supplements – conclusions 154
Creatine 154
Nature and origins of body creatine 154
Functions of creatine 154
Rationale and evidence for the use of creatine supplements 155
Coenzyme Q_{10} (ubiquinone) 156
Nature and sources of coenzyme Q_{10} 156
Functions of coenzyme Q_{10} 157
Rationale and evidence for the use of coenzyme Q₁₀ supplements 158

α-Lipoic acid 159
   Nature and sources of body α-lipoic acid 159
   Functions of α-lipoic acid 160
   Rationale and evidence for the use of α-lipoic acid supplements 161
Methylsulphonylmethane (MSM) 162
   Nature and sources of MSM 162
   MSM as a supplement 162

8 Natural products and extracts 164
   Scope of the chapter 164
   Secondary plant metabolites 165
      Terpenoids 166
      Phenolic compounds (phenols and polyphenols) 167
      Nitrogen-containing alkaloids and sulphur-containing compounds 168
      How might these secondary metabolites reduce risk of chronic disease? 171
   The individual plant and animal extracts 173
      Agnus castus 173
      Aloe vera 174
      Bee products 175
      Chitosan 178
      Echinacea 179
      Garlic 180
      Ginger 183
      Ginkgo biloba 185
      Ginseng 188
      Guarana 190
      Kelp 191
      Milk thistle 192
      Saw palmetto 194
      Spirulina 196
      Chlorella 196
      St John’s Wort (Hypericum perforatum) 197
      Tea extracts 202

9 Functional foods 205
   Introduction and scope of the chapter 205
   The phytosterols and phytostanols 206
   The phyto-oestrogens 210
   Probiotics, prebiotics and synbiotics 215
      Definitions 215
      The lactic acid bacteria 216
      Breast milk and the ‘bifidus factor’ 216
      What makes a good probiotic? 217
      Suggested benefits of probiotics 217
