Introduction to Communication Systems Simulation

Maurice Schiff
# Contents

Preface  

**CHAPTER 1**

Elements of a Communication System  

1.1 The Transmitter  
1.1.1 The Data Source  
1.1.2 Source Encoding  
1.1.3 Forward Error Correction  
1.1.4 Interleaving  
1.1.5 Baseband Filtering  
1.1.6 Modulation  

1.2 The Transmission Channel  
1.2.1 Additive White Gaussian Noise  
1.2.2 Interference  
1.2.3 Fading  

1.3 Receiver  
1.3.1 Frequency Offset  
1.3.2 Phase Offset  
1.3.3 Timing Offset  
1.3.4 Data Recovery  

1.4 Conclusion  

Selected Bibliography  

**CHAPTER 2**

Linear Time Invariant Systems  

2.1 LTI Systems  

2.2 Fourier Transform (FT) Theory  
2.3 The Digital Fourier Transform  
2.4 DFT Windows  
2.5 The Fast Fourier Transform  
2.6 Conclusion  

Selected Bibliography  

**CHAPTER 3**

Sampling  

3.1 The Sampling Operation  
3.2 The Nyquist Sampling Theorem
### Contents

3.3 Recovering the Signal from Its Samples 38
3.4 Band-Pass Sampling 41
3.5 Conclusion 44
Selected Bibliography 45

**CHAPTER 4**

Filters 47

4.1 General Considerations 47
4.2 The Laplace Transform 50
4.3 Poles, Zeros, and Stability 51
4.4 The Two Worlds of a Filter
   4.4.1 Infinite Impulse Response filters 53
   4.4.2 Finite Impulse Response Filters 54
4.5 The z Transform 54
4.6 From s to z 55
4.7 Frequency Warping 58
4.8 The IIR Filter 59
4.9 General Implementation of a Filter of Form \( N(z)/D(z) \) 61
4.10 Practical Consideration in IIR Filter Simulation 62
4.11 Conclusion 63
Selected Bibliography 63

**CHAPTER 5**

Digital Detection 65

5.1 The Vector Channel 65
5.2 The Waveform Channel 68
5.3 The Matched Filter Receiver 69
5.4 From Signals to Vectors 73
5.5 The I, Q Vector Space 76
5.6 Conclusion 77
Selected Bibliography 77

**CHAPTER 6**

Modulation 79

6.1 Amplitude Modulation (MASK) 79
6.2 Frequency Modulation (MFSK) 79
6.3 Phase Modulation (MPSK) 83
6.4 \( \pi/4 \) DQPSK Modulation 86
6.5 Offset QPSK Modulation 86
6.6 QAM Modulation 86
6.7 MSK Modulation 88
6.8 OFDM Modulation 89
6.9 Pulse Position Modulation 92
6.10 Pulse Width Modulation 93
6.11 GSM EDGE Modulation 93
6.12 Spread Spectrum Modulation
   6.12.1 Frequency Hopping 96
6.12.2 Direct Sequence Pseudo Noise 96
6.13 Conclusion 102
Selected Bibliography 102

CHAPTER 7
Demodulation 103
7.1 In-Phase (I) and Quadrature (Q) Down Conversion Process 103
7.2 Low-Pass Filtering 104
7.2.1 CIC Filter 105
7.2.2 Polyphase Filter 105
7.2.3 Half Band Filter 106
7.3 Offset Parameter Recovery 107
7.3.1 Frequency Offset 107
7.3.2 Data Timing 110
7.4 Phase/Frequency Recovery 112
7.4.1 BPSK 113
7.4.2 QPSK 114
7.4.3 Decision Feedback 115
7.5 Conclusion 115
Selected Bibliography 117

CHAPTER 8
Baseband Pulse Shaping 119
8.1 Baseband Pulse Analyses 119
8.2 The Raised Cosine Pulse 122
8.3 Intersymbol Interference and Eye Diagrams 125
8.4 The Root Raised Cosine Filter 128
8.5 Conclusion 129
Selected Bibliography 130

CHAPTER 9
Bit Error Rate Calculations 131
9.1 The BER Measurement Process 131
9.2 System Group Delay 133
9.3 \( E_b/N_0 \) Calibration 135
9.3.1 Physical RF World Simulation 135
9.3.2 Standard BER Runs 137
9.4 Conclusion 137
Selected Bibliography 137

CHAPTER 10
Channel Models 139
10.1 Flat Fading 139
10.2 Rician Flat Fade 142
10.3 The Jakes Model 143
10.4 Frequency Selective Fading 144
10.5 Effects of Fading on BER Performance 146
