## Contents

### Part I  Basics

1. **Knowledge Representation**
   - 1.1 Basic Concepts
   - 1.2 Cognitive Science
   - 1.3 Types of Human Knowledge
   - 1.4 Knowledge Representation Techniques
     - 1.4.1 Object-Attribute-Value Triplets
     - 1.4.2 Uncertain Facts
     - 1.4.3 Fuzzy Facts
     - 1.4.4 Rules
     - 1.4.5 Semantic networks
     - 1.4.6 Frames
   - 1.5 Knowledge Representation Languages
     - 1.5.1 Logic-Based Representation Languages
     - 1.5.2 Frame-Based Representation Languages
     - 1.5.3 Rule-Based Representation Languages
     - 1.5.4 Visual Languages for Knowledge Representation
     - 1.5.5 Natural Languages and Knowledge Representation
   - 1.6 Knowledge Engineering
   - 1.7 Open Knowledge Base Connectivity (OKBC)
   - 1.8 The Knowledge Level

2. **Ontologies**
   - 2.1 Basic Concepts
     - 2.1.1 Definitions
     - 2.1.2 What Do Ontologies Look Like?
     - 2.1.3 Why Ontologies?
     - 2.1.4 Key Application Areas
     - 2.1.5 Examples
   - 2.2 Ontological Engineering
     - 2.2.1 Ontology Development Tools
     - 2.2.2 Ontology Development Methodologies
   - 2.3 Applications
     - 2.3.1 Magpie
     - 2.3.2 Briefing Associate
Part II The Model Driven Architecture and Ontologies

6. Software Engineering Approaches to Ontology Development

6.1 A Brief History of Ontology Modeling

6.1.1 Networked Knowledge Representation and Exchange Using UML and RDF

6.1.2 Extending the Unified Modeling Language for Ontology Development

6.1.3 The Unified Ontology Language

6.1.4 UML for the Semantic Web: Transformation-Based Approach

6.1.5 The AIFB OWL DL Metamodel

6.1.6 The GOOD OLD AI ODM Proposal

6.2 Ontology Development Tools Based on Software Engineering Techniques

6.2.1 Protégé

6.2.2 DUET (DAML UML Enhanced Tool)

6.2.3 An Ontology Tool for IBM Rational Rose UML Models

6.2.4 Visual Ontology Modeler (VOM)

6.3 Summary of Relations Between UML and Ontologies

6.3.1 Summary of Approaches and Tools for Software Engineering-Based Ontology Development

6.3.2 Summary of Differences Between UML and Ontology Languages

6.3.3 Future Development

7. The MDA-Based Ontology Infrastructure

7.1 Motivation

7.2 Overview

7.3 Bridging RDF(S) and MOF

7.4 Design Rationale for the Ontology UML Profile

8. The Ontology Definition Metamodel (ODM)

8.1 ODM Metamodels

8.2 A Few Issues Regarding the Revised Joint Submission

8.3 The Resource Description Framework Schema (RDFS) metamodel

8.4 The Web Ontology Language (OWL) Metamodel

9. The Ontology UML Profile

9.1 Classes and Individuals in Ontologies

9.2 Properties of Ontologies

9.3 Statements

9.4 Different Versions of the Ontology UML Profile
10. Mappings of MDA-Based Languages and Ontologies........................................211
   10.1 Relations Between Modeling Spaces........................................................211
   10.2 Transformations Between Modeling Spaces..............................................214
   10.3 Example of an Implementation: an XSLT-Based Approach..........................217
       10.3.1 Implementation Details.................................................................218
       10.3.2 Transformation Example.................................................................219
   10.3.3 Practical Experience..............................................................................222
   10.3.4 Discussion...............................................................................................225

Part III Applications

11. Using UML Tools for Ontology Modeling.........................................................229
    11.1 MagicDraw..........................................................230
        11.1.1 Starting with MagicDraw.................................................................230
        11.1.2 Things You Should Know when Working with UML Profiles.......................232
    11.1.3 Creating a New Ontology.........................................................................234
    11.1.4 Working with Ontology Classes..............................................................237
    11.1.5 Working with Ontology Properties.........................................................240
    11.1.6 Working with Individuals.......................................................................244
    11.1.7 Working with Statements......................................................................246
    11.2 Poseidon for UML.....................................................................................247
        11.2.1 Modeling Ontology Classes in Poseidon.............................................249
        11.2.2 Modeling Ontology Individuals and Statements in Poseidon..................250
    11.3 Sharing UML Models Between UML tools and Protége Using the UML Back End..251

12. An MDA Based Ontology Platform: AIR.........................................................255
    12.1 Motivation.................................................................................................255
    12.2 The Basic Idea............................................................................................256
    12.3 Metamodel - the Conceptual Building Block of AIR...................................258
    12.4 The AIR Metadata Repository....................................................................259
    12.5 The AIR Workbench..................................................................................262
    12.6 The Role of XML Technologies....................................................................264
    12.7 Possibilities................................................................................................265

13. Examples of Ontology.......................................................................................267
    13.1 Petri Net Ontology......................................................................................267
        13.1.1 Organization of the Petri Net Ontology..................................................269
        13.1.2 The Core Petri Net Ontology in the Ontology UML Profile.......................272
        13.1.3 Example of an Extension: Upgraded Petri Nets....................................275
