Contents

Preface ....................................................................................................................... xi

Overview

1. Advances in Polymeric Matrices and Drug Particle Engineering ........ 2
   Sönke Svenson

Polymeric Matrices

2. Injectable Drug Delivery Based on Polymer Solutions: Experiment and Modeling ......................................................... 14
   Anthony J. McHugh, Jessica R. DesNoyer, and Chandrashekar Raman

3. Poly(Ortho esters): Some Recent Developments ............................. 29
   Jorge Heller and John Ban

4. Paclitaxel Delivery from Novel Polyphosphoesters: From Concept to Clinical Trials ......................................................... 44
   Stephen K. Dordunoo, William C. Vincek, Mahesh Chaubal, Zhong Zhao, Rena Lapidus, Randall Hoover, and Wenbin Dang

5. Novel Nanogels for Drug Binding and Delivery ................................. 69
   P. Somasundaran, Fang Liu, Soma Chakraborty, Carl C. Gryte, Namita Deo, and T. Somasundaran

   Nobuyuki Morimoto, Shin-ichiro M. Nomura, Naomi Miyazawa, and Kazunari Akiyoshi

vii
Engineered Drug Particles
16. Using a Supercritical Fluid-Based Process: Application to Injectable Sustained-Release Formulations of Biomolecules ……… 250
J. Richard, F. Deschamps, A. M. De Conti, and O. Thomas

17. Paclitaxel Nanoparticles: Production Using Compressed CO₂ as Antisolvent: Characterization and Animal Model Studies … 262
Fenghui Niu, Katherine F. Roby, Roger A. Rajewski, Charles Decedue, and Bala Subramaniam

18. Nanoprecipitation of Pharmaceuticals Using Mixing and Block Copolymer Stabilization………………………………….278
Brian K. Johnson, Walid Saad, and Robert K. Prud'homme

19. Particle Engineering of Poorly Water Soluble Drugs by Controlled Precipitation,……………………………………………….292

20. Improvement of Dissolution Rate of Poorly Water Soluble Drugs Using a New Particle Engineering Process: Spray Freezing into Liquid………………………………………………………305
Kirk A. Overhoff, Keith P. Johnston, and Robert O. Williams III

21. Preparation of Nanostructured Particles of Poorly Water Soluble Drugs via a Novel Ultrarapid Freezing Technology……….320

22. Water-Soluble Polymer Formation of Monodispersed Insulin Microspheres……………………………………………………329
Larry Brown, Yuanxi Qin, Kenneth Hogeland, John McGeehan, Kathy Mason, Travis Jeannotte, Robert Fortier, and Eric Moore

23. Preparation of Fast-Dissolving Tablets Based on Mannose……………… 340
Yourong Fu, Seong Hoon Jeong, Jacqueline Callihan, Jeanny Kim, and Kinam Park

Author Index……………………………………………………………………………………………………353
Subject Index…………………………………………………………………………………………………..355
