Contents

Microreactors as Tools in the Hands of Synthetic Chemists
P.H. Seeberger, K. Geyer, J.D.C. Codée ........................................... 1

Micro-Fluidic and Lab-on-a-Chip Technology
X. Zhang, S.J. Haswell ................................................................. 21

Microreactors as New Tools for Drug Discovery and Development
S.Y.F. Wong-Hawkes, J.C. Matteo, B.H. Warrington, J.D. White ........ 39

Microchemical Systems for Discovery and Development
K.F. Jensen .................................................................................. 57

Isoindolones and Related N-Heterocycles via Palladium Nanoparticle-Catalyzed 3-Component Cascade Reactions
R. Grigg, V. Sridharan ................................................................. 77

Applying Homogeneous Catalysis for the Synthesis of Pharmaceuticals
M. Beller ...................................................................................... 99
An Integrated Approach to Developing Chemoenzymatic Processes at the Industrial Scale
J. Tao, L. Zhao ................................................................. 117

Scale-Up in Microwave-Accelerated Organic Synthesis
H. Lehmann ................................................................. 133

Solid Supported Reagents in Multi-Step Flow Synthesis
I.R. Baxendale, S.V. Ley .............................................. 151

Solid-Phase Supported Synthesis: A Possibility for Rapid Scale-Up of Chemical Reactions
M. Meisenbach, T. Allmendinger, C.-P. Mak ..................... 187

Microstructured Reactors for Development and Production in Pharmaceutical and Fine Chemistry
V. Hessel, P. Löb, U. Kartschil, H. Löwe .......................... 205
