Oral Lipid-Based Formulations
Enhancing the Bioavailability of Poorly Water-Soluble Drugs

Edited by

## Contents

*Preface* .... vii  
*Contributors* .... xi

1. **Currently Marketed Oral Lipid-Based Dosage Forms: Drug Products and Excipients**  
   Robert G. Strickley  
   .............................................................. 1

2. **Lipid-Based Excipients for Oral Drug Delivery**  
   Lowell Gibson  
   .............................................................. 33

3. **Feasibility Assessment and Considerations for Scaling Initial Prototype Lipid-Based Formulations to Phase I/II Clinical Trial Batches**  
   Paul Sirois  
   .............................................................. 63

4. **Materials, Process, and Manufacturing Considerations for Lipid-Based Hard-Capsule Formats**  
   William J. Bowtle  
   .............................................................. 79

5. **Liquid Self-Microemulsifying Drug Delivery Systems**  
   Mette Grove and Anette Müllertz  
   .............................................................. 107

6. **Lipid-Based Isotropic Solutions: Design Considerations**  
   .............................................................. 129
7. Lipid-Based Self-Emulsifying Solid Dispersions .................................................. 149
    Madhav Vasanthavada and Abu T. M. Serajuddin

8. Oral Lipid-Based Formulations: Using Preclinical Data to Dictate Formulation Strategies for Poorly Water-Soluble Drugs ................................................. 185
    Christopher J. H. Porter and William N. Charman

9. Physiological Processes Governing the Gastrointestinal Absorption of Lipids and Lipophilic Xenobiotics ................................................................. 207
    Rachna Gajjar, Chun-Min Lo, and Patrick Tso

10. Characterizing Release from Lipid-Based Formulations ........................................ 241
    Jennifer Dressman, Karen Schamp, Karen Beltz, and Jochem Alsenz

11. Using In Vitro Dynamic Lipolysis Modeling as a Tool for Exploring IVIVC Relationships for Oral Lipid-Based Formulations ........................................... 257
    Dimitris G. Fatouros and Anette Müllertz

12. Case Studies: Rational Development of Self-Emulsifying Formulations for Improving the Oral Bioavailability of Poorly Soluble, Lipophilic Drugs ........................................ 273
    Ping Gao and Walter Morozowich

13. Design and Development of Supersaturatable Self-Emulsifying Drug Delivery Systems for Enhancing the Gastrointestinal Absorption of Poorly Soluble Drugs ........................................... 303
    Ping Gao and Walter Morozowich
