Amphiphilic Starch -

A New Excipient for Ophthalmic Application

Von der Fakultät für Lebenswissenschaften

der Technischen Universität Carolo-Wilhelmina

zu Braunschweig

zur Erlangung des Grades einer

Doktorin der Naturwissenschaften

(Dr. rer. nat.)

genehmigte

D i s s e r t a t i o n

aus Braunschweig
List of contents

Intent and preview of the investigations 1

PART I Pharmaceutical technological aspects

1 n-octeny succinate starch and general aspects of emulsion formulation 7

2 Comparison of two different n-octenylsuccinate starch types with respect to emulsifying properties 17

3 Stability and compatibility/interaction studies on sodium diclofenac using microcalorimetry and differential scanning calorimetry 27

4 Development of n-octenylsuccinate starch stabilized emulsions for the non-enteral application route: short and long-term stability studies 36

PART II Cytotoxicity studies and ocular tolerance

5 The eye and ocular tolerance studies 59

6 n-octenylsuccinate starch: Evaluation of ocular tolerance 71

PART III Biopharmaceutical aspects

7 General biopharmaceutical aspects in ocular therapy 90

8 Influence of n-octenylsuccinate starch on in vitro permeation of sodium diclofenac across excised porcine cornea in comparison to Voltaren ophtha 112
9  Rheological study of the n-octenylsuccinate starch-mucin interaction mechanism  130

10  Evaluation of different n-octenylsuccinate starch formulations for ophthalmic application: investigation of ocular kinetics by means of fluorophotometry  140

Summary and general conclusions  159
