EVALUATION OF SOIL EXTRACTION METHODS FOR URANIUM

Von der Fakultät für Lebenswissenschaften
der Technischen Universität Carolo-Wilhelmina
tzu Braunschweig
zur Erlangung des Grades eines
Doktors der Naturwissenschaften
(Dr. rer. nat.)
genehmigte

Dissertation

von
Raafat Metwally Mohamed Zewainy
aus Monofia, Ägypten
TABLE OF CONTENTS

1. Introduction .................................................. 1
2. Material and Methods ......................................... 18
   2.1 Description of the sample material ....................... 18
   2.1.1 Soil samples originating from a greenhouse pot experiment with different crops .... 18
   2.1.2 Soil samples originating from an incubation experiment ......................... 20
   2.1.3 Soil samples from different sites around Schneeberg (Saxony) .................... 20
   2.1.4 Soil samples from long-term fertilization trials .................................. 23
   2.2 Soil sample preparation .................................... 25
   2.3 Different methods of U extraction from the soil ...................... 25
   2.4 Soil analysis ................................................ 26
   2.5 Statistical analysis ........................................ 27
   2.6 Safety measures ............................................ 27
3. Results ............................................................. 28
   3.1 Extractable U in greenhouse experiment soil samples .................... 28
   3.1.1 Extracting forces of AAAc-EDTA, DTPA, NH₄Ac and soil solution for U from soil ......................................................... 28
   3.1.2 Effect of total U in soil on the extractability of U ......................... 30
   3.1.3 Relationship between extracted U from soil and the plant U content ........ 35
   3.1.4 Effect of total P in soil on the extractability of U ......................... 36
   3.1.5 Effect of soil pH on the extractability of U .................................. 40
   3.1.6 Effect of the other factors on the extractability of U ....................... 41
   3.1.7 Effect of storage time on the extractability of U ............................. 42
   3.2 Extractable U in incubation experiment soil samples .................... 45
   3.2.1 Extracting forces of AAAc-EDTA, DTPA, NH₄Ac and soil solution for U from soil and the Effect of the addition of organic materials on the extractability of U .... 45
   3.2.2 Effect of soil pH on the extractability of U .................................. 49
# Table of Contents

3.2.3 Effect of storage time on the extractability of U ................................................. 49

3.3 Extractable U in Schneeberg (Saxony) soil samples ............................................. 52

3.3.1 Extracting forces of AAAc-EDTA, DTPA, NH₄Ac and soil solution for U from soil ................................................................................................................... 53

3.3.2 Effect of total U in soil on the extractability of U ................................................. 55

3.3.3 Effect of total P in soil on the extractability of U ................................................. 57

3.3.4 Effect of soil pH on the extractability of U ............................................................ 57

3.4 Extractable U in long-term trials soil samples ......................................................... 59

3.4.1 Extracting forces of AAAc-EDTA, DTPA, NH₄Ac and soil solution for U from soil ................................................................................................................... 59

3.4.2 Effect of total U in soil on the extractability of U ................................................. 62

3.4.3 Effect of total P in soil on the extractability of U ................................................. 62

3.4.4 Effect of soil pH on the extractability of U ............................................................ 62

3.4.5 Effect of total S in soil on the extractability of U ................................................. 66

3.4.6 Effect of total organic carbon (OC) in soil on the extractability of U ............... 66

4. Discussion .................................................................................................................... 69

4.1 Extractable U in greenhouse experiment soil samples .............................................. 69

4.2 Extractable U in incubation experiment soil samples .............................................. 76

4.3 Extractable U in Schneeberg (Saxony) soil samples ............................................. 78

4.4 Extractable U in long-term trials soil samples ......................................................... 80

5. Summary and Conclusions ......................................................................................... 84

6. References .................................................................................................................. 93

7. Appendix
