Barcelona

Nr. 806

**Design and Evaluation
of Signal Processing
Strategies for Cochlear
Implants based on
Psychoacoustic Masking
and Current Steering**

VDI verlag

Contents

Mathematical symbols	VII
Acronyms and abbreviations	IX
Abstract	XIII
Kurzfassung	XV
1 Introduction	1
2 Hearing with CIs	8
2.1 Sound	8
2.2 Anatomy and physiology of the auditory system	8
2.3 Representation of sounds in the auditory system	12
2.4 Cochlear implants	16
2.5 Representation of sounds with CIs	23
2.6 Speech and music perception with CIs	24
2.7 Current research directions in signal processing for CIs	26
3 Audio signal processing for CIs	29
3.1 The advanced combinational encoder (ACE)	29
3.2 The high resolution strategy (HiRes)	34
3.3 The spectral resolution strategy (SpecRes)	35
3.4 Comparison between actual signal processing strategies for cochlear implants	46
4 A psychoacoustic masking model for the stimulation of electrodes in CIs	47
4.1 The psychoacoustic advanced combinational encoder strategy (PACE)	47
4.2 The sinusoid extraction strategy (SineEx)	59
5 Evaluation of signal processing strategies for CIs	73
5.1 Hardware interfaces for the evaluation with CI recipients	74
5.2 Vo-Coder Interface for the evaluation with NH listeners	77
5.3 Acoustic Model Interface for the evaluation with ASR	87

6 Experimental results	91
6.1 Results with cochlear implant patients	91
6.2 Results with normal hearing listeners	107
6.3 Results with automatic speech recognition	113
7 Conclusions	117
Annex A: Just noticeable difference	122
Annex B: CI24M Implant Typical Currents	123
Annex C: Fragebogen zur Qualitätserhebung von Sprache (Speech quality questionnaire)	125
Annex D: Fragebogen zur Qualitätserhebung von Musik (Music quality questionnaire)	131
Bibliography	135
