Problems in Quantitative Linguistics 3

by

Radek Čech
Gabriel Altmann

Dedicated to Reinhard Köhler on the occasion of his 60th birthday

2011
RAM-Verlag
## Contents

Preface

1. Phonology and script
   1.1. Phoneme distribution: structural gaps
   1.2. Stress placement in isosyllabic poems
   1.3. Vowel duration
   1.4. Homophones
   1.5. Phonetic difference and frequency
   1.6. Script motifs
   1.7. Formal problems of rongorongo
   1.8. Symbol frequencies

2. Grammar
   2.1. Word form diversification
   2.2. Diversification of case in Finnish
   2.3. Inflection and derivation
   2.4. Transitivity
   2.5. Morph length
   2.6. Distribution of morphological features
   2.7. Paradigmatic expansion of words
   2.8. Morpheme dynamics
   2.9. Cohesion of compounds
   2.10. Symmetry of sentence structure
   2.11. Transitivity as a text parameter
   2.12. Transitivity and text deployment
   2.13. Transitivity and the verb
   2.14. Transitivity and child development
   2.15. Transitivity and aspect
   2.16. The distribution of full valency frames
   2.17. Syntactic network analysis: hub/authority weight versus degrees
   2.18. Syntactic network analysis: hub/authority weight as a text parameter
   2.19. Proper names as a high Transitivity feature
   2.20. Proper names and aspect of verbs

3. Semantics
   3.1. Yesypenko's linguistic world view
   3.2. Polysemy and synonymy
   3.3. The role of synonymy in self-regulation
   3.4. Distribution of semantic roles and frames (corpus)
3.5. Verb classes
3.6. Verb classes and valency
3.7. Meaning specificity and compounding

4. Synergetics
4.1. Arens’law
4.2. Frequency and polytexty
4.3. Frequency and noun generality
4.4. Increase of word length
4.5. Text length vs. word length
4.6. Word length and phoneme inventory
4.7. Word length distributions
4.8. Full valency and the frequency of verbs
4.9. Full valency and the length of verbs
4.10. Full valency and polysemy
4.11. Full valency and synonymy
4.12. Full valency and compounding
4.13. Full valency and derivation
4.14. Full valency and Menzerath’s law
4.15. Syntactic network analysis
4.16. Typology

5. Text analysis
5.1. Text development
5.2. Cumulative text development
5.3. Experiments with arc length
5.4. The binary syntactic code of sentence
5.5. The binary code of text
5.6. The development of writer’s view
5.7. Hřebíček’s hypothesis
5.8. Chaining and distances
5.9. Sonnet 1
5.10. Sonnet 2
5.11. Text activity 1
5.12. Text activity 2
5.13. Assonance
5.14. Frequency and position of words in a sentence
5.15. Word length and position in a sentence
5.16. Development of rhyme
5.17. Vowel auto-affinity in poems
5.18. The lambda indicator and Ord’s criterion
5.19. The lambda-indicator and Busemann’s adjective-verb ratio
5.20. Sentence length in discourse
5.21. Sentence length sequences in discourse
5.22. Properties of illocutive graphs 127
5.23. The frequency sequence of words in text 129
5.24. Frequency motifs in text 130
5.25. Thematic concentration 131
5.26. Dialogue: thematic concentration of participants 133
5.27. Text compactness 134
5.28. Frequency indicator A 135
5.29. A vocabulary richness indicator 136
5.30. Vocabulary richness and lambda-structure 137
5.31. Gini’s coefficient and vocabulary richness 138
5.32. Vocabulary richness project 139
5.33. A textological project 141
5.34. Text diffusity 142
5.35. Aggregation in poetry 143

6. Different issues 146
6.1. Rank-frequency distribution of classifications 146
6.2. Ranking and classification of verbs 147
6.3. Sentence length development in German 149
6.4. Verb development 151
6.5. History 151
6.6. Psychoanalytic word categories 153
6.7. Language of children 155
6.8. Vocalic language 156
