THE NEW YORK ACADEMY OF SCIENCES BOARD OF GOVERNORS
SEPTEMBER 2011 - SEPTEMBER 2012

CHAIR
Nancy Zimpher

VICE-CHAIR
Kenneth L. Davis

TREASURER
Robert Catell

PRESIDENT
Ellis Rubinstein [ex officio]

SECRETARY
Larry Smith [ex officio]

CHAIRMAN EMERITUS
Torsten N. Wiesel

HONORARY LIFE GOVERNORS
Karen E. Burke
Herbert J. Kayden
John F. Niblack

GOVERNORS
Len Blavatnik
Mary Brabeck
Nancy Cantor
Martin Chalfie
Milton L. Cofield
Robin L. Davisson
Mikael Dolsten
Elaine Fuchs
Jay Furman
Alice P. Gast
Brian Greene
Thomas L. Harrison

Steven Hochberg
Toni Hoover
Thomas Campbell Jackson
John E. Kelly III
Mehmood Khan
Jeffrey D. Sachs
Kathe Sackler
Mortimer D.A. Sackler
John E. Sexton
George E. Thibault
Paul Walker
Anthony Welters

Frank Wilczek
Michael Zigman

INTERNATIONAL GOVERNORS
Seth F. Berkley
Manuel Camacho Solis
Gerald Chan
S. "Kris" Gopalakrishnan
Rajendra K. Pachauri
Russell Read
Paul Stoffels

Animal Models: Their Value in Predicting Drug Efficacy and Toxicity

This volume stems from the conference “Animal Models and Their Value in Predicting Drug Efficacy and Toxicity,” which was jointly presented by the Global Medical Excellence Cluster and the New York Academy of Sciences, in collaboration with the Centre for Integrative Mammalian Physiology and Pharmacology at Imperial College London and King’s College London. The conference was generously supported by Bronze Sponsors, GlaxoSmithKline, Pfizer, sanofi-aventis, the Global Medical Excellence Cluster, and the Wellcome Trust; and also by Academy Friend Sponsors, Bristol-Myers Squibb, the British Pharmacological Society, Charles River, Imperial College London, King’s College London, the National Swine Research and Resource Center, Sigma Advanced Genetic Engineering (SAGE Labs), Taconic, the Jackson Laboratory, and the Physiological Society. Additional funding was made possible, in part, by the Office of the Director of the National Institute of Environmental Health Sciences (NIEHS), Grant R13RR032638 from the National Center for Research Resources (NCRR), the National Institute of General Medical Sciences (NIGMS), and the National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK).

The views expressed in written conference materials or publications, and by speakers and moderators, do not necessarily reflect the official policies of the U.S. Department of Health and Human Services, nor do mention by trade names, commercial practices, or organizations imply endorsement by the U.S. Government.

TABLE OF CONTENTS

- 1** Have animal models of disease helped or hindered the drug discovery process?
Ann Jacqueline Hunter
- 3** Current models and strategies in the development of antiobesity drugs
James S. Kinsey-Jones and Kevin G. Murphy
- 7** Relevance of angiotensin II-induced aortic pathologies in mice to human aortic aneurysms
Dennis Bruemmer, Alan Daugherty, Hong Lu, and Debra L. Rateri
- 11** Novel, nonreflex tests detect analgesic action in rodents at clinically relevant concentrations
Nick Andrews, Sinead Harper, Yasmin Issop, and Andrew S.C. Rice
- 14** Animal welfare and the 3Rs in European biomedical research
Dominic J. Wells
- 17** Best practices for the use of animals in toxicological research and testing
William S. Stokes

Become a Member Today of the New York Academy of Sciences

The New York Academy of Sciences is dedicated to identifying the next frontiers in science and catalyzing key breakthroughs. As has been the case for 200 years, many of the leading scientific minds of our time rely on the Academy for key meetings and publications that serve as the crucial forum for a global community dedicated to scientific innovation.

Select one **FREE *Annals* volume** and up to **five volumes for only \$40 each.**

Network and exchange ideas with the leaders of academia and industry.

Broaden your knowledge across many disciplines.

Gain access to exclusive online content.

Join Online at **www.nyas.org**

Or by phone at **800.344.6902** (516.576.2270 if outside the U.S.).

- 21** Progress toward generating informative porcine biomedical models using induced pluripotent stem cells
Franklin West and Steven Stice
- 24** A knockout mouse resource for the biomedical research community
K.C. Kent Lloyd
- 27** Minimizing strain influences in a genetically modified mouse phenotyping platform
Michael D. Hayward, Olesia Buiakova, and David S. Grass
- 31** The blessings and curses of C57BL/6 substrains in mouse genetic studies
Camron D. Bryant
- 34** Modeling inflammation and microvascular dysfunction
Felicity N.E. Gavins
- 36** TRPV1 and TRPA1 channels in inflammatory pain: elucidating mechanisms
Susan D. Brain
- 38** Imaging of endocrine gene expression in a humanized transgenic rat
Julian R.E. Davis
- 40** Systems biology of the heart: hype or hope?
T. Alexander Quinn and Peter Kohl
- 44** Is it time for *in silico* simulation of drug cardiac side effects?
Gary R. Mirams and Denis Noble
- 48** Human stem cell-derived cardiomyocytes for pharmacological and toxicological modeling
Sian E. Harding
- 50** Humanized mice as a preclinical tool for infectious disease and biomedical research
Leonard D. Shultz, Michael A. Brehm, Sina Bavari, and Dale L. Greiner
- 55** Humanized mice for the study of type 1 and type 2 diabetes
Dale L. Greiner, Michael A. Brehm, Vishnu Hosur, David M. Harlan, Alvin C. Powers, and Leonard D. Shultz
- 59** Deconstructing hepatitis C virus infection in humanized mice
Marcus Dorner and Alexander Ploss
- 63** Animal models got you puzzled?: think pig
Eric M. Walters, Yuksel Agca, Venkateshu Ganjam, and Tim Evans
