Nutrigenomics and Nutrigenetics in Functional Foods and Personalized Nutrition

Lynnette R. Ferguson
Contents

Preface........................................................................................................................................... ix
Editor ................................................................................................................................................ xiii
Contributors ....................................................................................................................................... xv

SECTION I  Examples of Some Key Gene–Diet Interactions

Chapter 1  Nutrigenetics and Nutrigenomics: Importance for Functional Foods and Personalized Nutrition ................................................................. 3

Lynnette R. Ferguson

Chapter 2  Variations in Solute Transporter Genes Affecting Micronutrient Solute Transport and Human Health ................................................................. 25

Peter Eck

Chapter 3  Genetic Variants in the Omega-6 and Omega-3 Fatty Acid Metabolic Pathway: Their Role in the Determination of Nutritional Requirements and Chronic Disease Risk ................................................. 83

Artemis P. Simopoulos

Chapter 4  Nutrigenomic Approaches to Unraveling the Physiological Effects of Complex Foods ........................................................................................ 105

Peter J. Gillies and John P. Vanden Heuvel

SECTION II  Modifying Disease Risk through Nutrigenetics and Nutrigenomics

Chapter 5  Modulating the Risk of Cardiovascular Disease through Nutrigenetics ........................................................................................................... 119

Antonio Garcia-Rios, Javier Delgado-Lista, Pablo Perez-Martinez, Francisco Pérez-Jimenez, and Jose Lopez-Miranda
Chapter 6  Modulating the Risk of Obesity and Diabetes through Nutrigenetics ................................................................. 131
Helen M. Roche and Catherine Phillips

Chapter 7  Nutrigenetics and Crohn's Disease................................................................. 153
Lynnette R. Ferguson

Chapter 8  Microbiome and Host Interactions in Inflammatory Bowel Diseases: Relevance for Personalized Nutrition ...................... 169
Wayne Young, Bianca Knoch, and Nicole C. Roy

Chapter 9  Importance of Cell-Specific Gene Expression Patterns for Understanding Nutrient and Gene Interactions in Inflammatory Bowel Diseases........................................................................... 191
Anna E. Russ, Jason S. Peters, Warren C. McNabb, and Nicole C. Roy

SECTION III  Technologies in Nutrigenetics/Nutrigenomics

Chapter 10  Data Mining and Network Analysis: Potential Importance in Nutrigenomics Research .................................................. 207
Vijayalakshmi Varma and Jim Kaput

Chapter 11  Metabolomics: An Important Tool for Assessing State of Health and Risk of Disease in Nutrigenomics Research .................. 229
Hui-Ming Lin and Daryl Rowan

Chapter 12  Epigenetics—What Role Could This Play in Functional Foods and Personalised Nutrition?............................................. 243
Matthew P.G. Barnett, Shalome A. Bassett, and Emma N. Bermingham

Chapter 13  Foodomics to Study Efficacy of Human Dietary Interventions: Proof of Principle Study................................................. 269
Stephanie Ellett, Isobel R. Ferguson, Shuotun Zhu, Nishi Karunasinghe, Gareth Marlow, Daniel Hurley, Wen J. Lam, Dug Yeo Han, and Lynnette R. Ferguson
Chapter 14 Considerations in Estimating Genotype in Nutrigenetic Studies..... 281

Angharad R. Morgan

SECTION IV Bringing Nutrigenomics to Industry, Health Professionals, and the Public

Chapter 15 Bringing Nutrigenomics to the Food Industry: Industry–Academia Partnerships as an Important Challenge.................. 293

Ralf C. Schlothauer and Joerg Kistler

Chapter 16 Commercialisation and Potential of Nutrigenetics and Nutrigenomics .................................................................305

Virginia Parslow and Lynnette R. Ferguson

Chapter 17 Bringing Nutrigenomics to the Public: Is Direct-to-Consumer Testing the Future of Nutritional Genomics?................. 333

David Castle

Chapter 18 Nutritional Genomics in Practice: Interaction with Health Professionals in Bringing Nutritional Genomics to the Public...... 347

Colleen Fogarty Draper

Chapter 19 Harvesting Normative Potential for Nutrigenomic Research .......... 361

Bart Penders and Michiel Korthals

Chapter 20 Public Health Context for Nutrigenomics and Personalized Nutrition .................................................................375

Elizabeth H. Marchlewicz, Karen E. Peterson, and Gilbert S. Omenn

Chapter 21 Nutrigenomics and Public Health .............................................. 399

Maria Agelli and John A. Milner

Index ........................................................................................................... 419
