

Rainer Kress

Linear Integral Equations

Third Edition

Contents

1	Introduction and Basic Functional Analysis	1
1.1	Abel's Integral Equation	2
1.2	Convergence and Continuity	5
1.3	Completeness	8
1.4	Compactness	8
1.5	Scalar Products	11
1.6	Best Approximation	13
	Problems	16
2	Bounded and Compact Operators	17
2.1	Bounded Operators	17
2.2	The Dual Space	20
2.3	Integral Operators	22
2.4	Neumann Series	23
2.5	Compact Operators	25
	Problems	32
3	Riesz Theory	33
3.1	Riesz Theory for Compact Operators	33
3.2	Spectral Theory for Compact Operators	40
3.3	Volterra Integral Equations	41
	Problems	44
4	Dual Systems and Fredholm Alternative	45
4.1	Dual Systems via Bilinear Forms	45
4.2	Dual Systems via Sesquilinear Forms	48
4.3	The Fredholm Alternative	52
4.4	Boundary Value Problems	58
	Problems	62

5	Regularization in Dual Systems	63
5.1	Regularizers	63
5.2	Normal Solvability	65
5.3	Index and Fredholm Operators	69
	Problems	74
6	Potential Theory	75
6.1	Harmonic Functions	75
6.2	Boundary Value Problems: Uniqueness	83
6.3	Surface Potentials	87
6.4	Boundary Value Problems: Existence	91
6.5	Nonsmooth Boundaries	96
	Problems	101
7	Singular Boundary Integral Equations	103
7.1	Hölder Continuity	103
7.2	The Cauchy Integral Operator	108
7.3	The Riemann Problem	116
7.4	Integral Equations with Cauchy Kernel	118
7.5	Cauchy Integral and Logarithmic Potential	125
7.6	Boundary Integral Equations in Hölder Spaces	129
7.7	Boundary Integral Equations of the First Kind	132
7.8	Logarithmic Single-Layer Potential on an Arc	135
	Problems	139
8	Sobolev Spaces	141
8.1	The Sobolev Space $H^p[0, 2\pi]$	141
8.2	The Sobolev Space $H^p(\Gamma)$	151
8.3	Weak Solutions to Boundary Value Problems	159
	Problems	170
9	The Heat Equation	171
9.1	Initial Boundary Value Problem: Uniqueness	171
9.2	Heat Potentials	174
9.3	Initial Boundary Value Problem: Existence	179
	Problems	181
10	Operator Approximations	183
10.1	Approximations via Norm Convergence	183
10.2	Uniform Boundedness Principle	185
10.3	Collectively Compact Operators	190
10.4	Approximations via Pointwise Convergence	191
10.5	Successive Approximations	193
	Problems	198

11 Degenerate Kernel Approximation	199
11.1 Degenerate Operators and Kernels	199
11.2 Interpolation	201
11.3 Trigonometric Interpolation	204
11.4 Degenerate Kernels via Interpolation	210
11.5 Degenerate Kernels via Expansions	215
Problems	218
12 Quadrature Methods	219
12.1 Numerical Integration	219
12.2 Nyström's Method	224
12.3 Weakly Singular Kernels	229
12.4 Nyström's Method in Sobolev Spaces	237
Problems	239
13 Projection Methods	241
13.1 The Projection Method	241
13.2 Projection Methods for Equations of the Second Kind	246
13.3 The Collocation Method	249
13.4 Collocation Methods for Equations of the First Kind	255
13.5 A Collocation Method for Hypersingular Equations	263
13.6 The Galerkin Method	267
13.7 The Lippmann–Schwinger Equation	272
Problems	278
14 Iterative Solution and Stability	279
14.1 Stability of Linear Systems	279
14.2 Two-Grid Methods	283
14.3 Multigrid Methods	287
14.4 Fast Matrix-Vector Multiplication	292
Problems	296
15 Equations of the First Kind	297
15.1 Ill-Posed Problems	297
15.2 Regularization of Ill-Posed Problems	301
15.3 Compact Self-Adjoint Operators	303
15.4 Singular Value Decomposition	309
15.5 Regularization Schemes	313
Problems	321
16 Tikhonov Regularization	323
16.1 Weak Convergence	323
16.2 The Tikhonov Functional	324
16.3 Quasi-Solutions	329

16.4	Minimum Norm Solutions	334
16.5	Classical Tikhonov Regularization	338
16.6	Ill-Posed Integral Equations in Potential Theory	343
	Problems	349
17	Regularization by Discretization	351
17.1	Projection Methods for Ill-Posed Equations	351
17.2	The Moment Method	358
17.3	Hilbert Spaces with Reproducing Kernel	360
17.4	Moment Collocation	361
	Problems	363
18	Inverse Boundary Value Problems	365
18.1	An Inverse Problem for the Laplace Equation	365
18.2	Decomposition Methods	368
18.3	Differentiability with Respect to the Boundary	378
18.4	Iterative Methods	383
18.5	Sampling Methods	390
	Problems	398
	References	399
	Index	409
