Table of Contents

Static Program Analysis via 3-Valued Logic .................................. 1
  Thomas Reps

Open Modeling in Multi-stakeholder Distributed Systems: Research
and Tool Challenges ..................................................... 2
  Robert J. Hall

An Algebraic Approach to the Static Analysis of Concurrent Software .... 3
  Javier Esparza

Polynomial Constants Are Decidable ....................................... 4
  Markus Müller-Olm, Helmut Seidl

Normalizable Horn Clauses, Strongly Recognizable Relations,
and Spi ................................................................. 20
  Flemming Nielson, Hanne Riis Nielson, Helmut Seidl

Nonuniform Alias Analysis of Recursive Data Structures and
Arrays ....................................................................... 36
  Arnaud Venet

Representing and Approximating Transfer Functions in Abstract
Interpretation of Heterogeneous Datatypes ................................ 52
  B. Jeannet

Automated Verification of Concurrent Linked Lists with
Counters ................................................................. 69
  Tuba Yavuz-Kahveci, Tevfik Bultan

Backward Type Inference Generalises Type Checking ................... 85
  Lunjin Lu, Andy King

More Precise Yet Efficient Type Inference for Logic Programs ......... 102
  Claudio Vaucheret, Francisco Bueno

A Few Graph-Based Relational Numerical Abstract
Domains ..................................................................... 117
  Antoine Miné

Static Analysis of the Numerical Stability of Loops ..................... 133
  Matthieu Martel

On Termination of Logic Programs with Floating Point Computations .... 151
  Alexander Serebrenik, Danny De Schreye
Modular Control Flow Analysis for Libraries .......................... 165
   Christian W. Probst

An Efficient Inclusion-Based Points-To Analysis for
Strictly-Typed Languages ........................................... 180
   John Whaley, Monica S. Lam

Compactly Representing First-Order Structures for Static Analysis ...... 196

Possibly Not Closed Convex Polyhedra and the Parma Polyhedra
Library ................................................................. 213
   Roberto Bagnara, Elisa Ricci, Enea Zaffanella, Patricia M. Hill

Speeding Up Dataflow Analysis Using Flow-Insensitive Pointer
Analysis ............................................................... 230
   Stephen Adams, Thomas Ball, Manvir Das, Sorin Lerner,
   Sriram K. Rajamani, Mark Seigle, Westley Weimer

Improving the Precision of Equality-Based Dataflow Analyses .......... 247
   Erik Ruf

Guaranteed Optimization: Proving Nullspace Properties of Compilers..... 263
   Todd L. Veldhuizen, Andrew Lumsdaine

Representation Analysis for Coercion Placement ........................ 278
   Karl-Filip Faxén

Pipeline Modeling for Timing Analysis .................................. 294
   Marc Langenbach, Stephan Thesing, Reinhold Heckmann

Analysing Approximate Confinement under Uniform Attacks ............. 310
   Alessandra Di Pierro, Chris Hankin, Herbert Wiklicky

An Improved Constraint-Based System for the Verification of
Security Protocols .................................................... 326
   Ricardo Corin, Sandro Etalle

From Secrecy to Authenticity in Security Protocols ........................ 342
   Bruno Blanchet

Security Typings by Abstract Interpretation ................................ 360
   Mirko Zanotti

Static Confidentiality Enforcement for Distributed Programs ............. 376
   Andrei Sabelfeld, Heiko Mantel

Refinement of LTL Formulas for Abstract Model Checking ................. 395
   María del Mar Gallardo, Pedro Merino, Ernesto Pimentel
Making Abstract Model Checking Strongly Preserving 411
Francesco Ranzato, Francesco Tapparo

Semantics for Abstract Interpretation-Based Static Analyzes of
Temporal Properties 428
Damien Massé

Checking Safety Properties of Behavioral VHDL Descriptions by
Abstract Interpretation 444
Charles Hymans

States vs. Traces in Model Checking by Abstract Interpretation 461
Roberto Giacobazzi, Francesco Ranzato

Reuse of Results in Termination Analysis of Typed Logic Programs 477
Maurice Bruynooghe, Michael Codish, Samir Genaim, Wim Vanhoof

Finiteness Analysis in Polynomial Time 493
Chin Soon Lee

Detecting Optimal Termination Conditions of Logic Programs 509
Fred Mesnard, Etienne Payet, Ulrich Neumerkel

Author Index 527
