*Introduction* xi

1 Definition of Hopf algebras 1
1.1 Algebras 1
1.2 Coalgebras 5
1.3 Bialgebras and Hopf algebras 6
1.4 Duality 10
1.5 Commutative and cocommutative Hopf algebras 12
1.6 Actions and coactions 15
  1.6.1 Actions on algebras and coalgebras 17
  1.6.2 Coactions 22
1.7 Integrals and $*$-structures 27

*Notes* 33

2 Quasitriangular Hopf algebras 35
2.1 Quasitriangular structures 36
2.2 Dual quasitriangular structures 47
2.3 Cocycles and twisting 52
2.4 Quasi-Hopf algebras 62

*Notes* 66

3 Quantum enveloping algebras 69
3.1 $q$-Heisenberg algebra 70
3.2 $U_q(sl_2)$ and its real forms 82
3.3 $U_q(g)$ for general Lie algebras 92
3.4 Roots of unity 99

*Notes* 102

4 Matrix quantum groups 105
4.1 Quantum matrices 108
## Contents

9.4 Reconstruction theorems 467  
9.4.1 Reconstruction in vector spaces 467  
9.4.2 Braided reconstruction 476  

**Notes** 494

10 Braided groups and $q$-deformation 499  
10.1 Super and anyonic quantum groups 502  
10.2 Braided vectors and covectors 511  
10.3 Braided matrices and braided linear algebra 526  
10.4 Braided differentiation 539  
10.5 Examples of braided addition 559  
10.5.1 Coaddition on quantum matrices 559  
10.5.2 $q$-Euclidean space 564  
10.5.3 $q$-Minkowski space 570
