List of contributors vii
Foreword ix

Section 1. Review of the oil industry in the Former Soviet Union
1. Organization of Russian logging businesses 1
2. Drilling and testing operations 11
3. Stratigraphy of the major hydrocarbon bearing basins 19
4. Core analysis techniques 65
5. Problems with raw log data 75

Section 2. Summary of logging services in the Former Soviet Union
6. Spontaneous Potential 93
7. Gamma ray 97
8. Density 103
9. Neutron 109
10. Sonic 121
11. Unfocused resistivity 129
12. Focused resistivity (laterolog) 157
13. Focused resistivity (induction) 169
14. Log interpretation methods in use in the Former Soviet Union 175

Section 3. Case studies etc.
Appendix 1. Case study: Identifying a gas–water contact with sonic and neutron logs 183
Appendix 2. Case study: A direct comparison of western and Russian porosity logs 187
Appendix 3. Case study: ‘Porosity from SP’: Miocene oil field, Caspian Sea 193
Appendix 4. Borehole geophysical logging suites in the FSU 201
Appendix 5. Formation water resistivities in the former Soviet Union and Eastern Europe 209
Appendix 6. Russian well log mnemonics 211
Appendix 7. Glossaries of logging terms 221
