DRIFT EXPLORATION IN THE CANADIAN CORDILLERA

Editors:  P.T. Bobrowsky, P. Geo
          S.J. Sibbick, P. Geo
          J.M. Newell, P. Eng
          P.F. Matysek, P. Geo

PAPER 1995-2
TABLE OF CONTENTS

FOREWORD .................................................. iii

1. J.M. Ryder: Recognition and Interpretation of Flow Direction Indicators for Former Glaciers and Meltwater Streams ................................................. 1

2. D.N. Proudfoot, P.T. Bobrowsky and D. Meldrum: Drift Exploration Potential Maps Derived from Terrain Geology Maps ............................................. 23

3. Stephen R. Hicock: Glacial Geology Applied to Drift Prospecting in Buttle Valley, Vancouver Island .......................................................... 33

4. Alain Plouffe: Drift Prospecting Sampling Methods .............................................. 43

5. Alain Plouffe and Lionel E. Jackson, Jr.: Quaternary Stratigraphy and Till Geochemistry in the Tintina Trench, near Faro and Ross River, Yukon Territory ...................... 53

7. Lionel E. Jackson, Jr.: Origin and Stratigraphy of Pleistocene Gravels in Dawson Range and Suggestions for Future Exploration of Gold Placers Southwestern Carmacks Map Area .............................................. 77

10. Martin Rappol: Glacial Dispersal of Indicator Boulders; Some Aspects of a Case Study from the Lower Saint Lawrence Region, Quebec .................................. 107

11. Peter T. Bobrowsky: Lithological Analysis in Drift Prospecting Studies ....................... 113

12. Bruce E. Broster and David H. Huntley: Effective Low-Cost Reconnaissance Drift Prospecting in Areas of Variable Terrain: An Example from the South-East Taseko Lakes Area, Central British Columbia ............................................ 121

13. John Knight: The Use of the Characteristics of Gold for Exploration in Glaciated Mountainous Areas, with an Example from the Kootenay District, Southeastern British Columbia .................................................. 127

14. T.A. Delaney and W.K. Fletcher: Sample Representivity and Gold Determination in Soils at the Fish Lake Property, British Columbia ........................................ 135

15. R.N.W. DiLabio: Residence Sites of Trace Elements in Oxidized Till ........................................ 139

16. W.W. Shilts: Geochemical Partitioning in Till ................................................ 149

17. P.J. Lindsay and W.W. Shilts: A Standard Laboratory Procedure for Separating Clay-Sized Detritus from Unconsolidated Glacial Sediments and their Derivatives ................................................ 165

18. S.J. Sibbick and D.E. Kerr: Till Geochemistry of the Mount Milligan Area, North-Central British Columbia; Recommendations for Drift Exploration for Porphyry Cu-Au Mineralization ........................................... 167

22. Colin E. Dunn: Biogeochemical Prospecting in Drift-Covered Terrain of British Columbia ................................................ 229

23. S.E. Pullan: Shallow Seismic Methods: Application to Drift Prospecting ........................................ 239

25. Melvyn E. Best: Resistivity Mapping Using Electromagnetic Techniques ........................................ 251
