Shortest Paths for Sub-Riemannian Metrics on Rank-Two Distributions

Wensheng Liu
Héctor J. Sussmann
# Table of Contents

1 Introduction  

2 Three examples  
   2.1 Riemannian geodesics  
   2.2 The Heisenberg algebra case  
   2.3 An abnormal minimizer  

3 Notational conventions and definitions  
   3.1 Manifolds, charts, bundles, curves and arcs  
   3.2 Hamiltonian functions, Hamilton vector fields, and bicharacteristics  
   3.3 Hamiltonian lifts and characteristics  
   3.4 Distributions, admissible curves, orbits  
   3.5 Nonholonomic distributions; regularity  

4 Abnormal extremals  

5 Sub-Riemannian manifolds, length minimizers and extremals  
   5.1 The sub-Riemannian distance, length minimization and time optimality  
   5.2 Extremals  
   5.3 The relationship between minimality and extremality  

6 Regular abnormal extremals for rank-two distributions  
   6.1 The regular abnormal foliation of a rank-two distribution  
   6.2 Regular abnormal biextremals of a sub-Riemannian manifold  

7 Local optimality of regular abnormal extremals  
   7.1 The main inequality  

vii
7.2 The normal form theorem ........................................ 51
7.3 The optimality theorem .......................................... 59

8 Strict abnormality ................................................. 60

9 Some special cases .................................................. 61
  9.1 2- and 3-generating distributions .............................. 62
  9.2 3-Regular distributions ......................................... 62
  9.3 The 4- and 5-dimensional cases .............................. 68
  9.4 The three-dimensional case ................................... 72
  9.5 A Lie group example ........................................... 73
  9.6 A nonsmooth abnormal extremal .............................. 74

Appendix A: The Gaveau–Brockett problem ......................... 75

Appendix B: Proof of Theorem 1 .................................... 81
  B.1: Control systems ................................................ 81
  B.2: The Maximum Principle ....................................... 84

Appendix C: Local optimality of normal extremals ................ 89

Appendix D: Rigid sub-Riemannian arcs and local optimality ......... 92

Appendix E: A nonoptimality proof ................................ 99
