CONTENTS

Preface xi

Chapter I: Introduction and foundations 1

1.1 Concept of a stochastic process and types 1
1.2 The Kolmogorov existence theorem 10
1.3 Some generalizations of the existence theorem:
   projective limits 17
1.4 Applications of projective limits 33
1.5 Complements and exercises 50
Bibliographical remarks 59

Chapter II: Conditioning and martingales 61

2.1 Definition and properties of conditioning 61
2.2 Conditional expectations and projection operators 79
2.3 Conditional probability measures 90
2.4 Martingale concepts and inequalities 110
2.5 Decompositions of discrete parameter martingales 126
2.6 Convergence theorems 134
2.7 Complements and exercises 151
Bibliographical remarks 162
# Contents

## Chapter III: Stochastic function theory

- 3.1 Separability and related hypotheses: standard case 165
- 3.2 Remarks on a lifting operation and applications 176
- 3.3 Separability and measurability: general case 185
- 3.4 Stochastic functions: regularity properties 194
- 3.5 Continuous and directed parameter martingale convergence 207
- 3.6 A limit theorem for regular projective systems 217
- 3.7 Complements and exercises 227
- Bibliographical remarks 230

## Chapter IV: Refinements in martingale analysis

- 4.1 Stopping times as a new tool 233
- 4.2 A calculus of real valued stopping times 252
- 4.3 Regularity properties of martingales 260
- 4.4 More on convergence theory 281
- 4.5 Martingale differences and $\mathcal{H}^p$-spaces 300
- 4.6 Complements and exercises 319
- Bibliographical remarks 330

## Chapter V: Martingale decompositions and integration

- 5.1 Preliminaries on continuous parameter processes 333
- 5.2 The Doob-Meyer decomposition theory 337
- 5.3 Square integrable martingales and stochastic integration 375
- 5.4 Stochastic integrators as Hilbertian spectral measures 422
- 5.5 Complements and exercises 431
- Bibliographical remarks 442

## Chapter VI: Stochastic integrals and differential systems

- 6.1 Semimartingale integrals 445
- 6.2 Bochner’s boundedness principle and its extensions 456
- 6.3 Multidimensional and multiparameter analogs 475
- 6.4 Stochastic differential equations 486
- 6.5 Progression to stochastic flows 527
- 6.6 Complements and exercises 529
Contents

Bibliographical remarks ..................................................... 535

Chapter VII: Stochastic analysis on differential structures \[539\]

7.1 Conformal martingales ................................................. 539
7.2 Martingales in manifolds .............................................. 545
7.3 Extensions to multiparameters ....................................... 562
7.4 Remarks on stochastic PDEs ......................................... 580
7.5 Complements and exercises .......................................... 582
Bibliographical remarks ..................................................... 585
