### 1 Modular Forms

1.1 Dirichlet L-Functions  3
1.2 The Modular Group  17
1.3 Modular Forms for $SL(2, \mathbb{Z})$  26
1.4 Hecke Operators  41
1.5 Twisting  54
1.6 The Rankin–Selberg Method  65
1.7 Hecke Characters and Hilbert Modular Forms  76
1.8 Artin L-Functions and Langlands Functoriality  90
1.9 Maass Forms  103
1.10 Base Change  119

### 2 Automorphic Forms and Representations of $GL(2, \mathbb{R})$

2.1 Maass Forms and the Spectral Problem  128
2.2 Basic Lie Theory  145
2.3 Discreteness of the Spectrum  165
2.4 Basic Representation Theory  186
2.5 Irreducible $(g, K)$-Modules for $GL(2, \mathbb{R})$  203
2.6 Unitarity and Intertwining Integrals  222
2.7 Representations and the Spectral Problem  241
2.8 Whittaker Models  243
2.9 A Theorem of Harish-Chandra  246
### Contents

#### 3 Automorphic Representations

3.1 Tate's Thesis
3.2 Classical Automorphic Forms and Representations
3.3 Automorphic Representations of $GL(n)$
3.4 The Tensor Product Theorem
3.5 Whittaker Models and Automorphic Forms
3.6 Adelization of Classical Automorphic Forms
3.7 Eisenstein Series and Intertwining Integrals
3.8 The Rankin–Selberg Method
3.9 The Global Langlands Conjectures
3.10 The Triple Convolution

#### 4 Representations of $GL(2)$ Over a $p$-adic Field

4.1 $GL(2)$ Over a Finite Field
4.2 Smooth and Admissible Representations
4.3 Distributions and Sheaves
4.4 Whittaker Models and the Jacquet Functor
4.5 The Principal Series Representations
4.6 Spherical Representations
4.7 Local Functional Equations
4.8 Supercuspidals and the Weil Representation
4.9 The Local Langlands Correspondence
