Acknowledgments ix

Preface: Building a Tectonic Culture in the Nineteenth Century xi
Technological Thought in Engineering and Architecture xi
The Building Process xii
Method xiii

Part I Structures, Materials, and People

1 Creating the Modern World through Communication, Commerce, and Progress 3
   Canals and Roads 5
   Railways Widen the Scope 9
   Transporting Information 10
   Telegraphy Changes Our Perception of the World 14
   Time Zones and Nationalism: The Telegraph Helps Organize the Globe 15
   Insurance and Profit: The Criteria Behind the Suez Canal 19
   Structural Changes in the Built Environment 21
   Communication Structures 23
   Commerce and Manufacture 25
   The Concept of Progress 26

2 Structural Materials, Methods, and Systems: The Prerequisites of Change 35
   Iron: A Material with Expanded Uses 36
   Wood: Changing a Traditional Material 46
   Reinforced Concrete: A New Material with Novel Possibilities 58
   An Example of Technological Thinking 60
   From Monolithic Appearance to Monolithic Structure 65
The Human Element: Manual Work, Mechanization, Progress, and Technological Thought 81
Mechanization and Progress 84
Industrial Production and Construction 90
Gilbreth's Motion Studies 93

Part II The Genesis of the Building Process

Worlds Apart: From the Thames to the Mont Cenis Tunnel 101
The Thames Project 104
Social and Commercial Stress in Engineering 124
A New Technology 126
The Mont Cenis Tunnel 130
Fell's Temporary Railway over the Pass 150

The Transition and the Catalyst: The Conway and Britannia Bridges and the Suez Canal 159
The Conway and Britannia Bridges 159
Process, a New Aesthetic Consideration 177
The Suez Canal as a Catalyst 178

Patterns of Technological Thought: Buildings from the Sayn Foundry to the Galerie des Machines 205
The Sayn Foundry and Associative Design Thinking 211
Kew Palm House and the Pattern of Technological Method 218
New Approaches to Systems 220
The Crystal Palace 226
Hybrid Types: The American Light-Wood Frame 254
The "Brompton Boilers" 258
The Tallest Tower and the Biggest Shed 262
Eiffel's Thinking and the Galerie des Machines 264

The Result in Small and Large: The Langwies Viaduct and the Panama Canal 281
Eduard Ziiblin and the Langwies Viaduct 282
Panama: A New Order of Magnitude Demands Novel Organization 295

Conclusion: The Building Process and Technological Thinking 347
Organizational Thought 349
Structures and Machines, Building Method and War, Process and Life 351

Notes 359
