Contents

10. Time-domain and frequency-domain analysis of non-linear astronomical time series
   T. Subba Rao

PART TWO  Applications to Astronomy

11. Time series problems in astronomy: an introduction
    Eric D. Feigelson

12. Time delay estimates for Q0957 + 561 A, B
    David J. Thomson and Rudy Schild

13. Continuum power spectrum components in X-ray sources: detailed modelling and search for coherent periodicities
    L. Stella, E. Arlandi, G. Tagliaferri, G. L. Israel

14. Wavelet methods in astronomical time series analysis
    Jeffrey D. Scargle

15. Non-parametric methods for shift and periodicity detection in irregularly measured data
    Jaan Pelt

16. A multi-channel, cross-spectral technique for calculating best-fit time-delay spectra
    Brian Vaughan

17. Period analysis of variable stars
    J. Cuypers

18. Change analysis of astronomical data
    F. Lombard and C. Koen

19. Doppler tomography of starspot distributions on stellar surfaces
    A. Collier Cameron

20. Nowcasting astronomical seeing and forecasting telescope environment for the ESO VLT
    Fionn Murtagh and Marc Sarazin

21. Linear and non-linear modelling of the geomagnetic aa indices
    Gy. Terdik
Contents

22. A sample of astronomical time series
   Paul Hertz and Eric D. Feigelson
   340

PART THREE - Applications to Meteorology and Climatology

23. Problems and examples in the estimation of fractal dimension from meteorological and earthquake data
   D. Vere-Jones, R. B. Davies, D. Harte, T. Mikosch and Q. Wang
   359

24. Characterizing trends in climatological time series: an application to Brera Observatory (Milan) rainfall series
   R. Sneyers, A. M. Siani and S. Palmieri
   376

25. Applications of singular spectrum analysis to climatological time series
   R. Vautard and C. A. Pires
   388

26. Change points in meteorological time series
   Pierre Hubert
   399

27. Detection of pollution signals in tree-ring series using AR processes and neural networks
   J. Guiot and L. Tessier
   413

28. Statistical verification studies and future scenarios of modelled climate change due to the 'greenhouse effect'
   Christian-D. Schönwiese
   427

29. Controlling the homogeneity of a long meteorological series: the series of Padova (1725–present)
   Dario Camuffo and Franco Zardini
   441
