The Pleasures of Counting

T. W. Körner

Trinity Hall
Cambridge
CONTENTS

Preface viii

I The uses of abstraction

1 Unfeeling statistics 3
   1.1 Snow on cholera 3
   1.2 An altar of pedantry 14

2 Prelude to a battle 21
   2.1 The first great submarine war 21
   2.2 The coming of convoy 25
   2.3 The second submarine war 32

3 Blackett 38
   3.1 Blackett at Jutland 38
   3.2 Tizard and radar 44
   3.3 The shortest wavelength will win the war 50
   3.4 Blackett's circus 57

4 Aircraft versus submarine 62
   4.1 Twenty-five seconds 62
   4.2 Let's try the slide-rule for a change 73
   4.3 The area rule 79
   4.4 What can we learn? 87
   4.5 Some problems 93

II Meditations on measurement

5 Biology in a darkened room 101
   5.1 Galileo on falling bodies 101
   5.2 The long and the short and the tall 105

6 Physics in a darkened room 116
   6.1 The pyramid inch 116
   6.2 A different age 127
Contents

7 Subtle is the Lord 137
  7.1 Galileo and Einstein 137
  7.2 The Lorentz transformation 141
  7.3 What happened next? 149
  7.4 Does the earth rotate? 154

8 A Quaker mathematician 159
  8.1 Richardson 159
  8.2 Richardson's deferred approach to the limit 164
  8.3 Does the wind have a velocity? 176
  8.4 The four-thirds rule 186

9 Richardson on war 194
  9.1 Arms and insecurity 194
  9.2 Statistics of deadly quarrels 198
  9.3 Richardson on frontiers 208
  9.4 Why does a tree look like a tree? 215

III The pleasures of computation

10 Some classic algorithms 231
  10.1 These twice five figures 231
  10.2 The good old days 237
  10.3 Euclid's algorithm 242
  10.4 How to count rabbits 250

11 Some modern algorithms 258
  11.1 The railroad problem 258
  11.2 Braess's paradox 268
  11.3 Finding the largest 275
  11.4 How fast can we sort? 282
  11.5 A letter of Lord Chesterfield 292

12 Deeper matters 298
  12.1 How safe? 298
  12.2 The problems of infinity 305
  12.3 Turing's theorem 311

IV Enigma variations

13 Enigma 319
  13.1 Simple codes 319
  13.2 Simple Enigmas 331
  13.3 The plugboard 338
Contents

14 The Poles 348
  14.1 The plugboard does not hide all finger-prints 348
  14.2 Beautiful Polish females 353
  14.3 Passing the torch 362

15 Bletchley 368
  15.1 The Turing bombes 368
  15.2 The bombes at work 377
  15.3 SHARK 381

16 Echoes 391
  16.1 Hard problems 391
  16.2 Shannon's theorem 398

V The pleasures of thought

17 Time and chance 413
  17.1 Why are we not all called Smith? 413
  17.2 Growth and decay 422
  17.3 Species and speculation 433
  17.4 Of microorganisms and men 444

18 Two mathematics lessons 452
  18.1 A Greek mathematics lesson 452
  18.2 A modern mathematics lesson I 459
  18.3 A modern mathematics lesson II 464
  18.4 A modern mathematics lesson III 471
  18.5 A modern mathematics lesson IV 477
  18.6 Epilogue 481

19 Last thoughts 488
  19.1 A mathematical career 488
  19.2 The pleasures of counting 492

Appendix 1. Further reading 494
  A1.1 Some interesting books 494
  A1.2 Some hard but interesting books 501

Appendix 2. Some notations 508

Appendix 3. Sources 511
