Canopy Arthropods

Edited by

N.E. Stork
Head of Biodiversity Division in the Department of Entomology, The Natural History Museum, London, UK; Now Director of the Cooperative Research Centre for Tropical Rainforest Ecology and Management, James Cook University, Cairns, Australia

J. Adis
Senior Scientist, Tropical Ecology Working Group, Max-Planck-Institute for Limnology, Plön, Germany

and

R. K. Didham
Commonwealth Scholar, The Natural History Museum, London and the NERC Centre for Population Biology, Ascot, UK
Contents

List of contributors ix
Preface xiv

Part One
Methods of Studying Arthropods in Trees

1 Sampling arthropods from tree-crowns by fogging with knockdown insecticides: lessons from studies of oak tree beetle assemblages in Richmond Park (UK). 3
N.E. Stork and P.M. Hammond

2 A review of methods for sampling arthropods in tree canopies. 27
Y. Basset, N.D. Springate, H.P. Aberlenc and G. Delvare

3 Advances in using the canopy fogging technique to collect living arthropods from tree-crowns. 53
W. Paarmann and K. Kerck

4 Knockdown efficiency of natural pyrethrum and survival rate of living arthropods obtained by canopy fogging in Central Amazonia. 67
J. Adis, W. Paarmann, C.R.V. da Fonseca and J.A. Rafael

Part Two
Community Structure of Coleoptera Assemblages

5 Beetle species diversity and faunal similarity in Venezuelan rainforest tree canopies. 85
J.G. Davies, N.E. Stork, M.J.D. Brendell and S.J. Hine

6 Host-specificity and the effective specialization of tropical canopy beetles. 104
N.A. Mawdsley and N.E. Stork
7 Determinants of species richness in assemblages of canopy arthropods in rainforests.  
R.L. Kitching, H. Mitchell, G. Morse and C. Thebaud  
131

8 Canopy arthropods of coastal Sitka spruce trees on Vancouver Island, British Columbia, Canada.  
N.N. Winchester  
151

9 The beetle fauna of different tree species in forests of Rwanda and East Zaire.  
T. Wagner  
169

10 Tree-crown beetles in context: a comparison of canopy and other ecotone assemblages in a lowland tropical forest in Sulawesi.  
P.M. Hammond, N.E. Stork and M.J.D. Brendell  
184

11 Patterns of beetle species diversity in Castanopsis acuminatissima (Fagaceae) trees studied with canopy fogging in mid-montane New Guinea rainforest.  
A. Allison, G.A. Samuelson and S.E. Miller  
224

12 Species abundance and body size relationships in insect herbivores associated with New Guinea forest trees, with particular reference to insect host-specificity.  
Y. Basset  
237

13 Arthropod biodiversity in the canopy of New Caledonian forests.  
E. Guilbert  
265

Part Three  
Community Structure of Non-Coleopteran Assemblages

14 Diversity of an Amazonian canopy grasshopper community in relation to resource partitioning and phylogeny.  
C. Amedegnato  
281

15 Dipteran tree-crown assemblages in a diverse southern temperate rainforest.  
R.K. Didham  
320

16 Diversity and recolonization dynamics of selected arthropod groups on different tree species in a lowland rainforest in Sabah, Malaysia with special reference to Formicidae.  
A. Floren and K.E. Linsenmair  
344
Contents

17 The ant fauna of tree canopies in Central Amazonia: a first assessment. 382
   A.Y. Harada and J. Adis

18 Estimation of arboreal and terrestrial arthropod densities in the forest canopy as measured by insecticide smoking. 401
   H. Watanabe

Part Four
The Biology of Canopy Arthropods

19 The ecology and behaviour of arboreal dung beetles in Borneo. 417
   A.J. Davis, J. Huijbregts, A.H. Kirk-Spriggs, J. Krikken and S.L. Sutton

20 Studies on the biology of a canopy-dwelling carabid beetle collected by canopy fogging in the rainforest of Sulawesi (Indonesia). 433
   W. Paarmann and D. Paarmann

21 Bioacoustic monitoring of insect communities in a Bornean rainforest canopy. 442
   K. Riede

22 Spatial and temporal use of microhabitats as a key strategy for the colonization of tree bark by Entomobrya nivalis L. (Collembola: Entomobryidae). 453
   A. Priming

23 The epiphytic lichen Evernia prunastri L. as a habitat for arthropods: shelter from desiccation, food-limitation and indirect mutualism. 477
   A. Priming and H.-P. Wirtz

Part Five
The Management and Conservation of Canopy Arthropods

24 Distinguishing the woods from the trees. 497
   B.J. Richardson, S. Burgin, F.F. Azarbayjani and S. Lutubula

25 Insect biomass in Amazonian forest fragments. 510
   J.R. Malcolm

26 The significance of edge effects in the management of forests for invertebrate biodiversity 534
   C.M.P. Ozanne, C. Hambler, A. Foggo and M.R. Speight
Contents

27 Canopy arthropod studies for the future. 551
   N.E. Stork, R.K. Didham and J. Adis

Index . 563
