**CAMBRIDGE**  
UNIVERSITY PRESS

# Contents

	<i>Preface</i>	xiii
1	<b>Introduction</b>	1
1.1	Chaos: a physical example	6
1.2	The transition to chaos	13
1.3	Determinism and predictability	20
1.4	Chaos and quantum mechanics	25
2	<b>Chaos: tools and concepts</b>	29
2.1	The number continuum	31
2.2	Mappings	36
2.3	Fractals	51
2.4	Symbolic dynamics	60
3	<b>Chaos in classical mechanics</b>	64
3.1	Lagrangian and Hamiltonian Mechanics	64
3.2	The double pendulum	73
3.3	Integrability versus chaos	79
4	<b>Chaos in quantum mechanics</b>	83
4.1	Quantized chaos	85
4.1.1	Random matrix theory	86
4.1.2	Level dynamics	98
4.1.3	The trace formula	101
4.2	Semi-quantum chaos	106
4.3	Quantum chaos	112
5	<b>The kicked rotor: paradigm of chaos</b>	117
5.1	The classical kicked rotor	119
5.2	Chirikov's overlap criterion	127

5.3	The quantum kicked rotor	130
5.4	The kicked molecule	137
5.5	Symmetry and localization	146
<b>6</b>	<b>Microwave-driven surface state electrons</b>	<b>150</b>
6.1	The SSE model	151
6.2	Quantum dynamics: technical tools	164
6.2.1	Sturmian method	164
6.2.2	Fredholm approach	167
6.2.3	Analytical decay rates	170
6.3	The multi-photon regime	174
6.4	The chaotic regime	177
<b>7</b>	<b>The hydrogen atom in a strong microwave field</b>	<b>181</b>
7.1	Experiment	183
7.2	Quantum calculations	187
7.3	Ionization thresholds as chaos thresholds	191
7.4	High frequency localization of chaos	195
7.5	Bichromatic drive: prediction of a "giant resonance"	196
<b>8</b>	<b>The kicked hydrogen atom</b>	<b>203</b>
8.1	The model	206
8.2	Phase-space fractal and powerlaw decay	211
8.3	Absence of elliptic points	214
<b>9</b>	<b>Chaotic scattering with CsI molecules</b>	<b>216</b>
9.1	The CsI scattering system	221
9.2	Classical chaotic scattering	223
9.3	Quantum chaotic scattering	230
9.4	Ericson fluctuations	234
<b>10</b>	<b>The helium atom</b>	<b>240</b>
10.1	Brief history of the helium problem	242
10.2	The one-dimensional model	245
10.3	Classical dynamics	248
10.3.1	Periodic orbits	250
10.3.2	Helium: a chaotic scattering system	252
10.4	Quantum analysis	255
10.4.1	Complex rotation	256
10.4.2	The helium spectrum: an empirical formula	260
10.4.3	Periodic orbits and scaled energy spectroscopy	263
10.5	Quantum signatures of chaos	271
10.5.1	The Ericson regime	277

10.5.2	Resonance dynamics	279
11	<b>Chaos in atomic physics: state of the art and research directions</b>	284
11.1	Quantum chaology	284
11.2	Type II quantum chaos	287
11.3	Microwave ionization	288
11.4	Hydrogen in a strong magnetic field	290
11.5	The helium atom	293
