Introduction 1

1 Medieval mathematics and optics and the Renaissance style in art 4
   The learned tradition 4
   The science of sight 6
   Naturalism in art 7
   Giotto’s mathematics 13
   Useful mathematics 14
   Goldsmiths and others 16

2 Building, drawing and ‘artificial perspective’ 20
   Reviving the ancient style 20
   Brunelleschi’s ‘artificial perspective’ 21
   Alberti’s construction (1435) 25
   Other perspective constructions 29
   Alberti’s check: an earlier rule? 35
   Brunelleschi’s invention 40

3 Through the wall: Masaccio’s Trinity fresco (c. 1426) 43
   Looking for squares 45
   The vault: orthogonal section 49
   The vault: transverse section—and a viewing distance 51
   The dimensions of the vaulted area 53
   The figures 54
   Explaining away the shapes of the abaci 55
   Masaccio’s mathematics 56
   Visually right and mathematically wrong 59

4 Piero della Francesca’s mathematics 62
   The abacus treatise 62
   Geometry in the abacus treatise 68
   The short book on the five regular solids 76

5 Piero della Francesca’s perspective treatise 80
   Piero’s preliminaries 81
   Perspective of plane figures 86
   Prisms and combinations of prisms 97
   More difficult shapes 102
6 Practitioners and patricians
Perspective and the ungrateful apprentice
Perspective treatises for painters
Mathematics in the education of the upper classes
Vitruvian problems
The Teatro Olimpico

7 The professionals move in
Calendar reform
Editing perspective: Egnazio Danti
Editing the Ancients: Federico Commandino
Explaining practice: Giovanni Battista Benedetti
The view from point A: Guidobaldo del Monte

8 Beyond the ancients
Conics in practical texts
Commandino and the ancients
Kepler on conics
Sundial problems
Benedetti on conics
Girard Desargues
Desargues on perspective
Desargues’ projective geometry
Mathematics for mathematicians

9 Fragmented perspectives
Pictures and treatises
Abraham Bosse
Laurent de La Hyre
Bosse’s treatise of 1648 and Desargues’ Perspective Theorem
Mathematical responses and another geometry
Blaise Pascal
Philippe de La Hire
The next generation and beyond

Appendix: The abacists’ pet triangle, with sides 13, 14, 15
