QUANTITATIVE SEISMOLOGY
SECOND EDITION

Keiiti Aki
Observatoire Volcanologique du Piton de la Fournaise

Paul G. Richards
Lamont-Doherty Earth Observatory of Columbia University

University Science Books
Sausalito, California
3.1 On the use of effective slip and effective elastic moduli in the source region 41

3.2 A Simple Example of Slip on a Buried Fault 42

3.3 General Analysis of Displacement Discontinuities across an Internal Surface Σ 49

3.4 Volume Sources: Outline of the Theory and Some Simple Examples 53

3.5 Body-force equivalents and the seismic moment tensor 54

3.6 The strain energy released by earthquake faulting 55

Suggestions for Further Reading 58

Problems 59

4. ELASTIC WAVES FROM A POINT DISLOCATION SOURCE 63

4.1 Formulation: Introduction of Potentials 63

4.1.1 Lamé’s theorem 67

4.2 Solution for the Elastodynamic Green Function in a Homogeneous, Isotropic, Unbounded Medium 68

4.2.1 Properties of the far-field P-wave 73

4.2.2 Properties of the far-field S-wave 73

4.2.3 Properties of the near-field term 74

4.3 The Double-Couple Solution in an Infinite Homogeneous Medium 76

4.4 Ray Theory for Far-Field P-waves and S-waves from a Point Source 82

4.4.1 Properties of the travel-time function T(x) associated with velocity field c(x) 87

4.4.2 Ray coordinates 90

4.4.3 The geometrical solution for P-waves in spherically symmetric media 92

4.4.4 The geometrical solution for S-waves in spherically symmetric media: Introduction of the components 95

4.4.5 The geometrical ray solutions in general inhomogeneous media 96

4.5 The Radiation Pattern of Body Waves in the Far Field for a Point Shear Dislocation of Arbitrary Orientation in a Spherically Symmetric Medium 101

4.5.1 A method for obtaining the fault-plane orientation of an earthquake and the direction of slip using teleseismic body-wave observations 102

4.5.2 Arbitrary orientation of the double couple in a homogeneous medium 106

4.5.3 Adapting the radiation pattern to the case of a spherically symmetric medium 110

4.5.4 Cartesian components of the moment tensor for a shear dislocation of arbitrary orientation 112

Suggestions for Further Reading 113

Problems 114
5. PLANE WAVES IN HOMOGENEOUS MEDIA AND THEIR REFLECTION AND TRANSMISSION AT A PLANE BOUNDARY  119

5.1 Basic Properties of Plane Waves in Elastic Media  120
   BOX 5.1 Notation  121
   5.1.1 Potentials for plane waves  123
   5.1.2 Separation of variables; steady-state plane waves  124
   BOX 5.2 The sign convention for Fourier transforms used in solving wave-propagation problems  125

5.2 Elementary Formulas for Reflection/Conversion/Transmission Coefficients  128
   5.2.1 Boundary conditions  128
   BOX 5.3 The distinction between kinematics and dynamics  129
   5.2.2 Reflection of plane P-waves and SV-waves at a free surface  130
   BOX 5.4 Impedance  132
   5.2.3 Reflection and transmission of SH-waves  136
   5.2.4 Reflection and transmission of P–SV across a solid–solid interface  139
   5.2.5 Energy flux  145
   5.2.6 A useful approximation for reflection/transmission coefficients between two similar half-spaces  147
   5.2.7 Frequency independence of plane-wave reflection/transmission coefficients  149

5.3 Inhomogeneous Waves, Phase Shifts, and Interface Waves  149
   BOX 5.5 Phase shifts: phase delay and phase advance  151
   BOX 5.6 The Hilbert transform and the frequency-independent phase advance  152

5.4 A Matrix Method for Analyzing Plane Waves in Homogeneous Media  157

5.5 Wave Propagation in an Attenuating Medium: Basic Theory for Plane Waves  161
   BOX 5.7 Different definitions of Q  162
   5.5.1 The necessity for material dispersion in an attenuating medium  163
   5.5.2 Some suggested values for material dispersion in an attenuating medium  165
   BOX 5.8 Relations between the amplitude spectrum and phase spectrum of a causal propagating pulse shape  167

5.6 Wave Propagation in an Elastic Anisotropic Medium: Basic Theory for Plane Waves  177
   BOX 5.9 Shear-wave splitting due to anisotropy  181

Suggestions for Further Reading  183
Problems  183

6. REFLECTION AND REFRACTION OF SPHERICAL WAVES; LAMB’S PROBLEM  189

6.1 Spherical Waves as a Superposition of Plane Waves and Conical Waves  190
   BOX 6.1 Fundamental significance of Weyl and Sommerfeld integrals  193

6.2 Reflection of Spherical Waves at a Plane Boundary: Acoustic Waves  195
   BOX 6.2 Determining the branch cuts of $\sqrt{\alpha^2 - p^2} = \xi$ in the complex $p$-plane, so that $\text{Im} \xi \geq 0$ for a whole plane.  197
8. FREE OSCILLATIONS OF THE EARTH 331

8.1 Free Oscillations of a Homogeneous Liquid Sphere 332
   BOX 8.1 Spherical surface harmonics 334

8.2 Excitation of Free Oscillations by a Point Source 342
   BOX 8.2 Identification of free-oscillation peaks when the earthquake source mechanism is known 349

8.3 Surface Waves on the Spherical Earth 351
   BOX 8.3 An example of the Poisson sum formula 352
   BOX 8.4 Different Legendre functions and their asymptotic approximations 354

8.4 Free Oscillations of a Self-Gravitating Earth 357

8.5 The Centroid Moment Tensor 366
   BOX 8.5 Consideration of initial stress 367

8.6 Splitting of Normal Modes Due to the Earth's Rotation 370

8.7 Spectral Splitting of Free Oscillations Due to Lateral Inhomogeneity of the Earth's Structure 374
   BOX 8.6 Quasi-degeneracy 377

Suggestions for Further Reading 381
Problems 381

9. BODY WAVES IN MEDIA WITH DEPTH-DEPENDENT PROPERTIES 385

9.1 Cagniard's Method for a Medium with Many Plane Layers: Analysis of a Generalized Ray 388

9.2 The Reflectivity Method for a Medium with Many Plane Layers 393
   BOX 9.1 Propagator matrices for SH and for P–SV problems 397
   BOX 9.2 Earth-flattening transformation and approximations 403

9.3 Classical Ray Theory in Seismology 407

9.4 Inversion of Travel-Time Data to Infer Earth Structure 413
   9.4.1 The Herglotz–Wiechert formula 414
   BOX 9.3 Abel's problem 417
   9.4.2 Travel-time inversion for structures including low-velocity layers 423
   BOX 9.4 Measurement of $\tau(p)$ 426

9.5 Wave Propagation in Media Having Smoothly Varying Depth-Dependent Velocity Profiles within Which Turning Points Are Present 429
   BOX 9.5 Scalar potentials for $P$-, $SV$-, and $SH$-waves in spherically symmetric media 431
   BOX 9.6 WKBJ theory 434
   BOX 9.7 A sample application of the Watson transform 439
   BOX 9.8 Useful transform pairs 445

9.6 Body-Wave Problems for Spherically Symmetric Earth Models in Which Discontinuities are Present between Inhomogeneous Layers 447
12. PRINCIPLES OF SEISMOMETRY  595

12.1 Basic Instrumentation  598
   12.1.1 Basic inertial seismometer  598
   12.1.2 Stable long-period vertical suspension  602
   12.1.3 Measurement of horizontal acceleration  604
   12.1.4 Measurement of strain and rotation  607

12.2 Frequency and Dynamic Range of Seismic Signals and Noise  609
   12.2.1 Surface waves with periods around 20 seconds  611
      BOX 12.1 Terminology associated with large ranges in value  612
      BOX 12.2 Recording media  613
   12.2.2 P-waves for $5^\circ < \Delta < 110^\circ$  614
   12.2.3 Range of amplitude spectral densities for surface waves and
       P-waves  614
   12.2.4 Microearthquake waves at short distance  615
   12.2.5 Ambient seismic noise  616
   12.2.6 Amplitude of free oscillations  617
   12.2.7 Amplitudes of solid Earth tide, Chandler wobble, plate motion, and
       moonquakes  618
   12.2.8 Seismic motion in the epicentral area  618
   12.2.9 Strain amplitudes of gravitational waves  620
      BOX 12.3 Engineering response spectra  621

12.3 Detection of Signal  623
   12.3.1 Brownian motion of a seismometer pendulum  623
   12.3.2 Electromagnetic velocity sensor  625
   12.3.3 The response characteristics of traditional observatory
       seismographs  629
   12.3.4 High sensitivity at long periods  632
      BOX 12.4 General features of the response of a traditional electromagnetic
       seismograph  634
   12.3.5 The nonlinearity of the seismic sensor  636
      BOX 12.5 Poles and zeros  637
   12.3.6 Feedback seismometers  639

Suggestions for Further Reading  642
Problems  643

Appendix 1: Glossary of Waves  647
Appendix 2: Definition of Magnitudes  655
Bibliography  657
Index  687
