Bipartite Graphs and their Applications
Contents

Preface vii
Notation xi

Chapter 1 Basic concepts 1
  1.1 Graphs 1
  1.2 Partially ordered sets 4
  1.3 Reducibility of problems and NP-completeness 4

Chapter 2 Introduction to bipartite graphs 7
  2.1 Recognising bipartite graphs 7
  2.2 Bipartite graphs of certain types 10
  2.3 Matrix characterisations of bipartite graphs 15
     Application 20

Chapter 3 Metric properties 23
  3.1 Radius and diameter 23
  3.2 Metric properties of trees 28
  3.3 Metric properties of the n-cube 32
     Application 39

Chapter 4 Connectivity 45
  4.1 k-connected graphs 45
  4.2 k-edge-connected graphs 48
     Application 52

Chapter 5 Maximum matchings 56
  5.1 Properties of maximum matchings 56
  5.2 Finding a maximum matching 59
  5.3 Maximum matchings in convex bipartite graphs 65
  5.4 Stable matchings 67
     Application 71

Chapter 6 Expanding properties 75
  6.1 Graphs with Hall’s condition 75
  6.2 Expanding graphs 82
  6.3 Expanders 85
     Application 90

6.4 Expanders and sorters
## Chapter 7
Subgraphs with restricted degrees

### 7.1 $(g,f)$-factors

### 7.2 Subgraphs with given degrees

### 7.3 2-factors and Hamilton cycles

### 7.4 $T$-joins

#### Application

### 7.5 Isomer problems in chemistry

## Chapter 8
Edge colourings

### 8.1 Edge colourings and timetables

### 8.2 Interval edge colourings

### 8.3 List colourings

### 8.4 Colour-feasible sequences

### 8.5 Transformations of proper colourings

### 8.6 Uniquely colourable bipartite graphs

#### Application

### 8.7 Rearrangeable telephone networks

## Chapter 9
Doubly stochastic matrices and bipartite graphs

### 9.1 Convex representations of doubly stochastic matrices

### 9.2 Matrices with a unique convex representation

### 9.3 Permanents and perfect matchings

## Chapter 10
Coverings

### 10.1 Some examples of covering problems

### 10.2 Vertex coverings and independent sets

### 10.3 Dulmage and Mendelsohn's canonical decomposition

#### Application

### 10.4 Decomposition of partially ordered sets into chains

## Chapter 11
Some combinatorial applications

### 11.1 Systems of distinct representatives

### 11.2 Generation of subsets of a set

### 11.3 Pebbling in hypergrids

### 11.4 Completing latin squares

## Chapter 12
Bipartite subgraphs of arbitrary graphs

### 12.1 Spanning bipartite subgraphs

### 12.2 Covering the edges of a graph with bipartite subgraphs

#### Applications

### 12.3 Optimal spanning trees and the Travelling Salesman Problem

### 12.4 The optimal spanning tree and optimal path problems

## Appendix
