# **Exponential Family Nonlinear Models**

**Springer**

# Contents

<b>1 Exponential Family</b>	<b>1</b>
1.1 Exponential Family . . . . .	1
1.2 Likelihood . . . . .	7
1.3 Likelihood Ratio and Deviance . . . . .	9
<b>2 Exponential Family Nonlinear Models</b>	<b>13</b>
2.1 Definition . . . . .	13
2.2 Likelihood . . . . .	19
2.3 Computation and Examples . . . . .	24
<b>3 Geometric Framework</b>	<b>29</b>
3.1 Introduction . . . . .	29
3.2 Geometry in Expectation Parameter Space . . . . .	31
3.2.1 Curvature arrays . . . . .	32
3.2.2 Directional curvatures and maximum curvatures . . .	35
3.2.3 Parameter transformation . . . . .	40
3.3 Geometry in Natural Parameter Space . . . . .	44
3.4 Some Specific Models . . . . .	49
3.4.1 Normal nonlinear regression models . . . . .	49
3.4.2 Generalized linear models . . . . .	49
3.4.3 One-parameter model and Efron curvature . . . . .	51
<b>4 Some Second Order Asymptotics</b>	<b>55</b>
4.1 Stochastic Expansions . . . . .	56
4.2 Approximate Bias and Variance . . . . .	64
4.3 Information Loss . . . . .	71

4.4	Observed Information and Fisher Information . . . . .	76
<b>5</b>	<b>Confidence Regions</b>	<b>83</b>
5.1	Introduction . . . . .	84
5.2	Likelihood Region in Terms of Curvatures . . . . .	86
5.2.1	Tangent space projection of likelihood region . . . . .	86
5.2.2	Influence of curvature measures . . . . .	90
5.3	Confidence Regions for Parameter Subsets . . . . .	93
5.3.1	Region based on likelihood ratio statistic . . . . .	94
5.3.2	Region based on score statistic . . . . .	96
<b>6</b>	<b>Diagnostics and Influence Analysis</b>	<b>101</b>
6.1	Introduction . . . . .	101
6.2	Analysis of Diagnostic Models . . . . .	105
6.2.1	Diagnostic models . . . . .	105
6.2.2	Regression coefficients . . . . .	106
6.2.3	Deviance and dispersion parameter . . . . .	109
6.2.4	Score statistic of outlier . . . . .	112
6.3	Influence Diagnostics Based on Case Deletion . . . . .	116
6.3.1	Diagnostics based on weighted least squares . . . . .	116
6.3.2	Diagnostics based on deviance . . . . .	119
6.4	Local Influence Analysis . . . . .	123
6.4.1	Perturbed models . . . . .	123
6.4.2	Random perturbation scheme . . . . .	128
6.5	Generalized Leverage . . . . .	136
6.5.1	Definition and computation . . . . .	136
6.5.2	Generalized leverage and local influence . . . . .	140
6.6	Diagnostics for Varying Dispersion . . . . .	141
6.6.1	Likelihood ratio and score statistics . . . . .	142
6.6.2	Adjusted likelihood ratio and score statistics . . . . .	147
6.6.3	Examples . . . . .	155
6.6.4	Simulation study . . . . .	158
<b>7</b>	<b>Extension</b>	<b>165</b>
7.1	Curved Exponential Families . . . . .	166
7.1.1	Introduction and geometric framework . . . . .	166

7.1.2	Statistical analysis . . . . .	167
7.2	Multinomial Nonlinear Models . . . . .	170
7.3	Embedded Models . . . . .	174
7.4	Quasi-likelihood Models . . . . .	177
7.5	Covariance Structure Models . . . . .	179
<b>Appendix</b>		<b>185</b>
<b>A</b>	<b>Matrix and Array</b>	<b>185</b>
A.1	Projection in Weighted Inner Product Space . . . . .	185
A.2	Array Multiplication . . . . .	188
A.3	Differentiation of Vector and Matrix . . . . .	191
<b>B</b>	<b>Some Asymptotic Results</b>	<b>195</b>
B.1	Notation and Preparation . . . . .	195
B.2	Necessary Condition of Consistency . . . . .	196
B.3	Consistency and Asymptotic Normality . . . . .	199
B.4	Asymptotic Numerical Stability of Iterations . . . . .	208
