List of Algorithms ix

Preface xi

CHAPTER 1. Introduction 1

1.1 Brief Overview of the State of the Art 3
1.1.1 Hermitian Matrices 3
1.1.2 Non-Hermitian Matrices 5
1.1.3 Preconditioners 6
1.2 Notation 6
1.3 Review of Relevant Linear Algebra 7
1.3.1 Vector Norms and Inner Products 7
1.3.2 Orthogonality 8
1.3.3 Matrix Norms 9
1.3.4 The Spectral Radius 11
1.3.5 Canonical Forms and Decompositions 13
1.3.6 Eigenvalues and the Field of Values 16

I Krylov Subspace Approximations 23

CHAPTER 2. Some Iteration Methods 25

2.1 Simple Iteration 25
2.2 Orthomin(1) and Steepest Descent 29
2.3 Orthomin(2) and CG 33
2.4 Orthodir, MINRES, and GMRES 37
2.5 Derivation of MINRES and CG from the Lanczos Algorithm 41

CHAPTER 3. Error Bounds for CG, MINRES, and GMRES 49

3.1 Hermitian Problems—CG and MINRES 49
3.2 Non-Hermitian Problems—GMRES 54
## Contents

10.5 Optimal Diagonal and Block Diagonal Preconditioners  

### CHAPTER 11. Incomplete Decompositions

11.1 Incomplete Cholesky Decomposition  
11.2 Modified Incomplete Cholesky Decomposition

### CHAPTER 12. Multigrid and Domain Decomposition Methods

12.1 Multigrid Methods  
12.1.1 Aggregation Methods  
12.1.2 Analysis of a Two-Grid Method for the Model Problem  
12.1.3 Extension to More General Finite Element Equations  
12.1.4 Multigrid Methods  
12.1.5 Multigrid as a Preconditioner for Krylov Subspace Methods  
12.2 Basic Ideas of Domain Decomposition Methods  
12.2.1 Alternating Schwarz Method  
12.2.2 Many Subdomains and the Use of Coarse Grids  
12.2.3 Nonoverlapping Subdomains
